

HAMS ROUGH POLYTUNNEL

DM/26/2031

Christine

In reply to your questions

1/ The polytunnel is constructed from 50mm steel tubes in an arch shape, these tubes are covered in clear plastic and then a dark green net to keep it cool in summer and insulate it in winter. This dark green net also helps make it more aesthetically pleasing in the countryside. The 2.3m double doors at either end are made with a wooden frame covered in the same clear plastic. (The doors are hinged not sliding, please disregard my photograph)

2/ Proposed floor plan attached (1:100)

3/ Proposed elevations of all sides (1:100)
