1 INTRODUCTION

Ground and Environmental Services Ltd (GES) was commissioned by Platinum Surrey Homes (The Client) to undertake a Phase 1 Contamination Risk Assessment on a proposed redevelopment site at Crawley Down Village Hall, Turners Hill Road, Crawley Down, Crawley, RH10 4HE.

It is understood that the proposed re-development of the site would involve the conversion and extension of the existing village hall into 6no. new residential dwellings with associated landscaping.

The aims of the Phase 1 Contamination Risk Assessment would be to identify environmental liabilities associated with the site and delineate any areas of potential contamination resulting from the site's previous and current usage in order to satisfy Condition 11 of Mid Sussex District Council's Planning Application DM/23/2544.

2 SITE LOCATION AND LAYOUT

The site is situated in the Mid Sussex village of Crawley Down, in a predominantly residential setting. The site is approximately 0.08 hectares and is situated upon grid reference TQ339379. The site comprises of a mixed two-storey and single-storey brick and tile village hall, with associated hardstanding.

The following features immediately bound the site:

- North, the site is bound by a relatively recent residential development.
- East, the site is bound by residential dwellings and gardens.
- South, the site is bound by a domestic dwelling with associated garden.
- West, the site is bound by Turners Hill Road, beyond which are domestic dwellings and gardens.

A site walkover was carried out on 26th November 2024 by a suitably experienced environmental consultant. Details of the walkover are included in Section 5 of this report. Site photographs are presented within Section 5, and existing and proposed site layout plans are presented at Appendix 1.

3 SITE HISTORY

A map search was carried out for the site and extracts of the following Ordnance Survey maps were obtained covering the period between 1875 and 2024.

These are presented in Appendix 2 and the relevant historic details are summarised as follows:

Mapping Date Range	On Site	Surrounding Area
1875	The site comprises part of a large open field. No significant features are noted on site.	The site is bound to the north and east by an open field. The site is bound to the southeast by a field, and to the south by what appear to be the grounds of a private dwelling. To the west, the site is bound by a road, beyond which are fields. The surrounding land is predominantly agricultural/fields and scattered woodland. Dwellings are noted approximately 150m north, 150-200m east, and 150m south.
1897	The site comprises a village hall in the western part. No significant features are noted in the eastern part.	Dwellings are noted approximately 20m northeast and 50m northwest of the site.
1910	The village hall has extended into the eastern part of the site.	A dwelling is noted immediately south of the site. A methodist chapel is noted approximately 30m north of the site.
1937	No significant development is noted on site.	No significant development is noted in the surrounding area.
1959		Residential development is noted approximately 40m west, 60m south of the site and approximately 70m east.
1968-1987		Residential development immediately east and northeast of the site. A garage is noted approximately 10m north of the site. Residential development is noted approximately 20m south of the site, and 40m west. A works is noted approximately 40m north of the site.
1993		No significant development is noted in the surrounding area.
1999		
2006		
2024		The garage is no longer shown to the north of the site, with the area having been developed to residential dwellings.

4 ENVIRONMENTAL SETTING

4.1 GEOLOGY

Reference to the British Geological Survey online geological mapping of the area indicates that the geology underlying the site comprises bedrock geology of the Upper Tunbridge Wells Sand Formation – Sandstone and siltstone, interbedded.

Bedrock Geology

Upper Tunbridge Wells Sand

The unit comprises a complex succession of interbedded deposits with both upward-fining and upward-coarsening cycles. Thinly bedded silty mudstones, siltstones, silty sandstones and fine-grained sandstones are laterally persistent over long distances. Sandstones, which form prominent scarp and dip slope features, are typically fine-grained and quartzose, weathering to a pale yellowish grey or brown colour. They are locally ferruginous in the St Leonard's Forest area where three sandstone beds are sufficiently persistent to be named Shelly Plain Sandstone, Colgate Sandstone and Roffey Park Sandstone (Gallois and Worssam, 1993). Clay ironstone occurs locally, notably in the Horsham-Crawley area (Worssam, 1972). In the Cuckfield area, silt is the dominant component (Lake and Thurrell, 1974). Here, grey and greenish grey silty mudstones and siltstones, red-mottled in part, dominate in the lower part of the unit, whereas pale grey to yellowish grey sandstone mostly appear in the upper part. Channel and slump structures, together with cross-bedding occur in the sandstones. Siltstones are commonly bioturbated.

4.2 GROUNDWATER

Reference to the British Geological Survey 1:50,000 scale Aquifer Designation Dataset, shows the site to be set upon a Secondary (A) Aquifer within the underlying Upper Tunbridge Wells Sands.

Secondary Aquifers include a wide range of rock layers or drift deposits with an equally wide range of water permeability and storage. Secondary aquifers are subdivided into two types.

Secondary A are permeable layers capable of supporting water supplies at a local scale and may be an important source of base flow to rivers. These include a wide range of rock layers or drift deposits with an equally wide range of water permeability and storage.

The soils are classified as high vulnerability within the Secondary Aquifer, with an intermediate pollutant speed.

The site is not located within an Environment Agency-designated Groundwater Source Protection Zone.

4.3 RADON

Reference to the British Geological Survey, National Geoscience Information Service indicated that the property is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level).

The site is therefore not located within a "Radon Affected Area" and no radon protective measures are necessary in the construction of new dwellings or extensions.

4.4 OTHER ENVIRONMENTAL INFORMATION

Reference was made to the environmental database Envirocheck, extracts from which are provided in Appendix 3. Relevant information relating to the site's environmental sensitivity is summarised as follows:

Dataset		On site	Nearest significant off-site feature
Agency & Hydrological	BGS Groundwater Flooding Susceptibility	Limited potential for groundwater flooding to occur.	304m west. Limited potential for groundwater flooding to occur.
	Discharge Consents	None	244m east. Discharge Of Other Matter-Surface Water in Freshwater River.
	Nearest Surface Water Feature	None	84m north.
	Pollution Incidents to Controlled Waters	None	843m south. February 1989. Unknown Sewage. Category 2 – Significant incident.
	Water Abstractions	None	973m northwest. Private Non-Industrial Amenity: Make-Up or Top Up Water. *No potable water abstractions within 1km.
	OS Water Network Lines	None	84m north. Inland River.
Waste	Historical Landfill Sites	None	597m north. Deposited Waste included Inert Waste.
	Local Authority Recorded Landfill Sites	None	788m north.
Geological	BGS Recorded Mineral Sites	None	663m east. Opencast Sand and Gravel Mine.
Industrial Land Use	Contemporary Trade Directory Entries	None	38m north. Blinds, Awnings & Canopies. Inactive.
	Commercial Services	None	29m northwest. Vehicle Repair, Testing and Servicing.
	Manufacturing and Production	None	33mn north. Works (Unspecified).
Sensitive Land Use	Ancient Woodland	None	139m southwest. Ancient and Semi-Natural Woodland.
	Nitrate Vulnerable Zones	Surface Water	30m northeast. Surface Water.

5 SITE WALKOVER

A site walkover was undertaken on 26th November 2024 by a suitably experienced Environmental Consultant. The salient details, along with site photographs are set out below.

At the time of the walkover, the site was accessed off Turners Hill Road. The site comprises a brick and tile village hall, with some wood and plaster at the front. The front part of the village hall is a two-storey structure, whilst the rear part of the hall is a single storey, brick and tile structure.

The roofs of the buildings comprised slate tiles. The hall was surrounded by hardstanding which comprised areas of concrete, asphalt and paving. Vegetation was noted to be growing through gaps in the concrete and asphalt and between the paving slabs. Vegetation on site and immediately bounding the site was in good condition with no evidence of any dead patches, discolouration or unusual growth.

No potential sources of significant contamination were identified in the external areas of the site, no evidence of any staining or strong odours was noted. No asbestos or suspected asbestos materials were noted on the exterior of the buildings, or anywhere across the external part of the site.

The internal areas of the hall were accessed and comprised a mixture of wood and tile flooring. Some areas of the hall had been excavated, presumably for foundation exposure. No staining or strong odours were noted within the hall, and no visible asbestos or suspected asbestos materials were noted within the hall.

6 CONTAMINATION RISK ASSESSMENT

This risk assessment has been undertaken with due regard to the advice relating to groundwater as provided in the Environment Agency's "Methodology for the Derivation of Remedial Targets for Soil and Groundwater to Protect Water Resources", the advice provided in the Contaminated Land (England) Regulations 2000, and the associated statutory guidance. The guidance defines contaminated land as any land that is in such a condition that by reason of substances in, on or under the land:

- significant harm is being caused or there is a significant possibility of such harm being caused; or
- pollution of controlled water is being or is likely to be caused.

This definition is based on the principles of risk assessment defined as a combination of the probability (or frequency) of occurrence of a defined hazard and the magnitude (including the seriousness) of the consequences. Central to the risk assessment process is the concept of pollutant linkage, that is a linkage between a contaminant and a receptor by means of a pathway.

Statutory definitions relating to pollution linkage.	
Contaminant	"A substance which is in, on or under the land and which has the potential to cause harm or to cause pollution of controlled waters."
Receptor	"A living organism, a group of living organisms, and ecological system or a piece of property" which meets given criteria. "Controlled waters which are, or could be, polluted by a contaminant".

Pathway	"One or more routes or means by, or through, which a receptor: • is being exposed to, or affected by, a contaminant, or • could be so exposed or affected".
---------	--

The relationship between these components is discussed below in order to identify the existence of any source-pathway-receptor linkage on the site, and hence the potential risks associated with any contamination. This risk assessment is based on the proposed redevelopment of the site for the conversion and extension of the existing village hall into 6no. new residential dwellings with associated landscaping.

The significance of the risks to the receptors/targets identified is based on an evaluation of the potential pathways between the contaminant source and receptors based on a residential with plant uptake end use.

Potential receptors/targets at the site and in the area in which the site is located include:

- future occupants and the general public;
- construction/maintenance workers;
- groundwater and surface water resources;
- underground services in and around the site;
- plants in proposed soft landscaping areas.

6.1 CONTAMINANT SOURCES

The site has been in use as a village hall since c.1890, prior to which it was part of an open field. The hall was extended in c.1910 and the site has undergone no significant development since this time. No potential sources of contamination were identified during the historical map search of the site. No significant potentially contaminative uses were noted in the immediate surrounding area.

The site walkover did not identify any existing potential sources of significant contamination on site.

Notwithstanding the above, desk study data has identified a vehicle repair centre, known as Palmers Autocentres Ltd, historically adjacent to the site, to the north-west. This site is now a residential estate known as Russell Place, however historically, sources of contamination associated with garage type sites, including metal, PAH, and TPH contamination from infilled made ground, but primarily from potential leaks/spills of potentially mobile fuel range hydrocarbons and other contaminants associated with vehicle repairs and lubrication/oil storage and possible leaks of mobile fuel range hydrocarbons from former underground fuel storage tanks which could potentially have migrated laterally to the proposed development site.

As such, these potential contaminants identified above, whilst not originating from the proposed development site, should be considered, and the potential risks from any such contaminants are discussed below.

In consideration of these potential risks, a review of historical data has been undertaken by GES, comprising of a Phase 2 Ground Investigation Report and Supplementary Environmental Assessment which was undertaken by consultants for the adjacent garage site in March 2014 and December 2014 respectively.

The Phase 2 Ground Investigation Report identified elevated lead, albeit within a single soil sample, and a number of PAHs within made ground across eastern and western ends of the site. A small number of PAHs and total fuel range hydrocarbons were recorded within shallow perched groundwater.

As such, remedial works were subsequently recommended. These comprised of a combination of impacted made ground soil excavation and removal from site, and further investigation/testing.

These remedial works were undertaken and additional laboratory testing confirmed that no significantly elevated contamination concentrations were present on site following the removal of the made ground soils from impacted areas across the site.

The reports and the contents contained within were approved by Mid Sussex District Council as per their Decision Notice dated 26th November 2019.

6.2 RISK TO HUMAN HEALTH

Potential sources of significant concentrations of toxic metals were not identified during the historical map survey or walkover of the site. Therefore, the risks to human health from these contaminants is considered to be low.

Similarly, potential sources of significant organic contamination across the site were not identified in the historical map search or walkover survey.

Given the approved remedial works undertaken at the adjacent historical garage site, the risks from the potential contamination sources at the proposed development site is considered to be low.

In addition, the site, as part of the proposed development, is to be entirely capped with either buildings or hardstanding thereby severing any potential pollutant pathway, as future site users will not come into contact with the existing underlying soils.

As such it is considered that the soils on site would be unlikely to pose a risk of significant harm to human health.

6.3 RISKS TO WATER RESOURCES

The geology underlying the site is anticipated to comprise bedrock soils of the Upper Tunbridge Wells Sand Formation, which is designated as a Secondary A aquifer. The site is not located in an Environment Agency-designated Groundwater Source Protection Zone.

The nearest surface water feature is located 84m north of the site. However, there are no sensitive potable water abstractions within 1km of the site.

Remedial works undertaken upon the adjacent former garage site would also serve to protect groundwater, as the impacted soils have subsequently been removed.

In addition, the investigation undertaken upon the adjacent former garage site identified a suspected groundwater flow direction of east to west, therefore any potential perched groundwater contamination from the adjacent site is not considered likely to have impacted groundwater underlying the proposed development site located to the south-east.

Based on the above and in the absence of any clear onsite liquid contamination sources the risk to water resources is considered low.

6.4 RISKS TO PLANTS

Potential sources of significant concentrations of phytotoxic metals were not identified during the historical map survey or walkover of the site. All plants, trees and grass present on site and immediately bounding the site were noted to be in good condition with no visible evidence of any dead patches, unusual growth or discolouration.

Notwithstanding the above, given the site is capped by either building or hardstanding, it is not considered that sufficient suitable growth media present on site in terms of any proposed areas of soft landscaping. Where soft landscaping areas are proposed, a clean suitable growth media should be imported into these areas.

It should be noted that the importation of clean soils to soft landscaping areas is not contamination mitigation, but purely for sufficient growth media.

6.5 RISKS TO BUILDINGS & SERVICES

Given the absence of significant sources of ground contamination it is considered that the risks to proposed buildings and services are very low, particularly following the approved remedial works historically undertaken upon the adjacent former garage site. This assumption is made based upon the absence of any clear onsite contamination with regard to both the walkover survey and the historical maps.

6.6 WASTE DISPOSAL

Should an excess volume of soil be required to be disposed of off-site then a waste classification may be required.

For a waste classification to be undertaken, materials may need to be subjected to leachate testing which would give an indication to the soluble component of contaminants and, therefore those most toxic to the environment in the waste. The classification will then allow the appropriate disposal pathway to a suitably licensed disposal facility to be determined.

7 PRELIMINARY CONCEPTUAL SITE MODEL

A preliminary conceptual site model (PCSM) is a system diagram identifying contaminant sources, routes of exposure (pathways), and which receptors are affected by contaminants moving along those pathways.

The model is produced to identify the zones of the site with different potential contaminations characteristics (e.g. whether contaminants in the soil are likely to be on the surface or at depth, distributed over an entire area or in localised 'hot spots').

The conceptual site model presented in the table below is based on the findings of the site walkover undertaken.

Crawley Down Village Hall, Turners Hill Road, Crawley
Phase 1 Preliminary Contamination Risk Assessment

Source	Pollutant		Pathway	Hazard		Receptor	Observations/ Recommendations	Assessed Risk
Contaminated ground	Metals, organic (hydrocarbons) could be present	→	Direct contact, ingestion, inhalation.	Health risks including skin irritation.	→	Humans: site workers	No potential sources of significant contamination identified historically or during the site walkover. Adjacent residential site remediated historically and localised contaminated made ground soils excavated and removed from site.	Low
			Surface run off.	Lateral movement to surface watercourses.	→	Aquatic resources, ecology and subsequent users including humans.	No potential sources of significant on-site contamination identified historically or during the site walkover and remedial works undertaken upon adjacent former garage site,	Low
			Leaching/ Dispersion.	Downward migration to groundwater.	→	Aquatic resources – Groundwater, abstraction wells) / surface waters.	Bedrock geology is Secondary A. No potential sources of contamination identified on site. No potable water abstractions within 1km.	Low
			Uptake by plants.	Phytotoxic effects.	→	Soft landscaped areas / plants.	No potential sources of contamination identified on site. No growth media on site and suitable growth media to be imported if required.	Low
			Direct contact	Aggressive chemical attack	→	Building structures and services	No potential sources of contamination identified on site.	Low

Crawley Down Village Hall, Turners Hill Road, Crawley
Phase 1 Preliminary Contamination Risk Assessment

Source	Pollutant	Pathway	Hazard	Receptor	Observations/ Recommendations	Assessed Risk
Liquid contaminant sources	Diesel, Petrol and Oils.	→ Direct contact; ingestion, inhalation.	Health risks including skin irritation. Lateral and vertical migration of contaminants.	→ Humans: site workers. Groundwater and surface water.	<i>No potential sources of contamination identified on site. Remedial works undertaken upon adjacent site and remaining soils validated.</i>	Low
Asbestos	Asbestos fibres within made ground and waste on site	→ Inhalation.	Health risks including asbestosis, mesothelioma, and lung cancer.	→ Humans: site workers and future occupants.	<i>No ACM encountered during walkover. Appropriate PPE should be worn.</i>	Low
Landfill, made ground,	Ground Gases (CO ₂ , CH ₄)	Inhalation and ingress into buildings	Asphyxiation and explosions	Buildings/humans/ future site users	<i>No landfill sites within 250m of the site, therefore low potential for soil gas.</i>	Low
Redundant Waste, Demolition Waste		Dermal Contact/ingestion. Potential for migration via surface water run- off	Health Risks	Humans: Site workers	<i>Any unwanted waste on site is to be removed from site during site preparatory works and disposed of in accordance with current legislation. Normal health and safety precautions.</i>	Low

8 CONCLUSIONS AND RECOMMENDATIONS

Ground and Environmental Services Ltd undertook a Preliminary Phase 1 Contamination Risk Assessment at a proposed residential redevelopment site at *Crawley Down Village Hall, Turners Hill Road, Crawley Down, Craley, RH10 4HE*. The purpose of the Phase 1 report was to identify environmental liabilities associated with the site and delineate any areas of contamination resulting from the site's previous and current usage.

- Current development proposals are for the conversion and extension of the existing village hall into 6no. new residential dwellings with associated landscaping.
- The site currently comprises a two- and single-storey village hall and areas of hardscaping.
- The site has been occupied by a village hall since c.1890, prior to which it was part of a field. Surrounding land has been a mix of residential and agricultural, although a former vehicle garage was historically present adjacent to the north-west of the site.
- The geology underlying the site comprises bedrock soils of the Upper Tunbridge Wells Sand Formation.
- The site is set upon a Secondary A Aquifer within the bedrock geology. The soils are classified as high vulnerability with an intermediate pollutant speed, within the Secondary Aquifer.
- The site is not located within an Environment Agency-designated Groundwater Source Protection Zone, and no sensitive potable water abstractions are present within a 1km radius of the site.
- No visual evidence of significant contamination was identified during the historical map search or site walkover.
- The risks to human health, plants, water resources, and buildings and services are considered to be low in the absence of any identifiable sources of ground contamination.
- In addition, potential risks from potential contaminants relating to the former adjacent garage site are considered to be low given the approved remedial works undertaken to remove any potentially contaminated made ground soils.

Based on the risk assessment procedures set out in the Contaminated Land Statutory Guidance, April 2012 (pertaining to The Contaminated Land (England) Regulations 2006), the site would not be considered "Contaminated Land, and no further actions are considered necessary, in terms of contamination, based on the development proposals.

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Additional SIMs

Published 1978 - 1990

Source map scale - 1:2,500

The SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') are further, minor editions of mapping which were produced and published in between the main editions as an area was updated. They date from 1947 to 1994, and contain detailed information on buildings, roads and land-use. These maps were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1993

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
