proposed 5G telephone mast is a great worry. As I am sure it will be detrimental for all residents health. There is also very well used local park and childrens play area that will be directly affected. There must be an enquiry i effects of 5G masts in populated areas. There must be a more suitable site out of town that could be used.

I await your reply as a matter of urgency.

To whom it may concern

I wish to strongly object to the proposed installation of a 30m 5G phone mast at Grange Close Worlds End . On the flowing grounds. It will be intrusive visually as it is a densely populated area .It will be extremely detrimental to the local area. It will impact the health and wellbeing of the people and wildlife within the area. The proposed site is between Bedelands Nature Reserve , a protected area, and a junior school. Which will be adversely affected.

RFR has been proven to harm wildlife and people alike. Especially the young and elderly. The council should not be exposing people and wildlife to harm for the sake of wireles connection. It is not necessary when wired fibre connection is much less of a risk and is available with much less impact.

5G masts require 3x more power than 4G. With the amount of new housing being built. Directly around this mast. What consideration has been given to how much extra electricity will be required. It is of great concern that the current electricity infrastructure will be placed under undue strain. The proposed site is totally unsuitable in my opinion. From an environmental and health point of view.

Please confirm receipt of my objection.

Regards
