Subject: Subject; Objection to Planning Application DM/25/1495 – Proposed Telephone Mast Installation

You don't often get email from [REDACTED] [on why this is important](#)

Dear Mid Sussex planning officer,

I am writing to formally object to the planning application for the proposed installation of a new telephone mast at [insert site location or reference], recently submitted to your department.

While I understand the need for modern communications infrastructure, I believe this proposal is wholly inappropriate for the location in question and would have a detrimental impact on both the character and environment of the area. My primary concerns are as follows:

1. Visual Appearance and Scale

The proposed mast is of considerable height and bulk, making it wholly out of keeping with the surrounding area, which is largely rural/residential in character. Its industrial appearance would clash starkly with the natural setting, becoming an eyesore on the local landscape and significantly altering the visual character of the area.

2. Loss of Outlook

For many residents, the mast would dominate the view from nearby homes and public spaces, causing a significant loss of outlook. This would negatively impact not only the enjoyment of our homes and surroundings, but also the sense of openness and tranquillity currently afforded by the landscape.

3. Environmental Impact

There is also the real potential for environmental damage, particularly the loss of trees and other established vegetation in the area. These natural features play a crucial role in supporting local wildlife and biodiversity, reducing pollution, and helping to absorb floodwater. The proposed installation could lead to irreversible harm to these vital systems, particularly during construction or through long-term maintenance access.

4. Precedent and Landscape Integrity

Approving this application could set an unwelcome precedent for future development of similar infrastructure in equally inappropriate locations, leading to the gradual erosion of our countryside's integrity.

In summary, while technological progress is necessary, it must be balanced with thoughtful planning and respect for local communities and environments. I urge you to refuse this application and instead encourage a more sensitive approach to infrastructure rollout, such as less visually intrusive designs, alternative locations, or co-location with existing structures.

Thank you for taking the time to consider my objection. I would be grateful to be kept informed of any developments in this matter.

Yours sincerely,

[REDACTED]
