Importance: High

Hi Emma,

Please can you forward to email below to the drainage consultants for their further comments.
Please can you stress the importance of their speedy feedback on this one.

Kind regards,

Rachel.

Dear Rachel,

I trust you are well.

RE: Mount Noddy Recreation Ground - Planning Conditions DM/25/0168

We understand that there was a query from the Flood Risk and Drainage Team on the Mount Noddy application (as attached), which we have discussed with the engineers and they have advised that;

- *An indicative falling head infiltration test was conducted during the site investigation, at which a rate of 6×10^{-6} m/s was recorded. This is deemed to be relatively poor, hence an alternative*

surface water discharge method was chosen in accordance with the surface water drainage hierarchy.

- *We have attached the Site Investigation Report made by Geo-Environmental in this response.*

I trust this helps clarify but any other questions just let us know.

Best,

James Penney *BSc(Hons), PgC, MLA, CMLI*
