2, Lucastes Rd, Haywards Heath

DOCUMENT 2: Arboricultural Analysis

T1, T2 & T3 are Silver Birch trees growing on the western boundary of the property, 2, Lucastes Road, Haywards Heath, RH16 1JL. This property is located within a Conservation Area.

The client, Mr Will Giesler, wishes to remove these trees as they are causing damage & harm to the neighbouring property: 4, Lucastes Road, Haywards Heath, RH16 1JL. He has stated that the roots are in direct contact with the built structure of 4, Lucastes Road.

In order to mitigate the loss of these trees, Mr. Giesler intends to replant a number of Portuguese Laurel specimens; this will alleviate the loss & also, in time, maintain the screening these 3 trees presently provide.

As these 3 trees are located in the space between the 2 properties, are not visible from the roadway of Lucastes Road, (because there are other trees preventing them being seen from the roadway), their loss does not represent any loss to the amenity of the locality. I suggest that the LPA make no objection, on arboricultural grounds, to their removal & replacement.
