Neighbour wishes to object to this application

Dear Sir/Madam,

Please be aware that you did not alert any neighbours to this application other than the site notice that is some way down the road. It is clear from the documents submitted by the applicant that there are neighbours across the road from the proposed site who should have been adequately notified.

I wish to object to the application on the following grounds:

1. The proposed structure at 36m long will dominate the surrounding area and have a negative impact on the utility of countryside and the users thereof
2. The hedge/woods at the western and northern edges of the field are deciduous and therefore the built form will be clearly visible from both Wineham Lane and Bob Lane as currently proposed. This will negatively impact the utility of the local residents
3. The combination of size and visibility will negatively impact the utility of the neighbourhood.
4. Although the initial application has a theoretical tie to the agricultural community, there is neither a need for this type of agriculture at this site, nor does it have any tie to the traditional local agricultural community that is largely grazing.
5. Although the proposal claims to be natural, it will produce, light, sound and scent pollution that will impact the local area, including the neighbours to the immediate west who are within 20 metres of the boundary fence and within 30 metres of the structure itself.

To that end, I wish to object to this application.
