Dear Catherine,

RE: DM/26/1257 - 10 Clayton Drive Burgess Hill West Sussex RH15 9HH

Thank you for your consultation on the above site. We have reviewed the application as the drainage consultant acting on behalf of the Council and wish to make the following comments.

The applicant is applying for a single storey rear extension, garage conversion.

The site is at low risk of flooding from all sources and the proposed development will not increase flood risk to the site or the surrounding area. Following a review of the submitted information and due to the site, size, location, and type of development **we have no objection on surface water and drainage grounds.**

Informative

The applicant must follow the drainage hierarchy of preference. Due to the size and location of the development, an infiltration test should be carried out in accordance with the Part H2, paragraph 1.34 to 1.37 of the Building Regulations (https://assets.publishing.service.gov.uk/media/5a80cf9ded915d74e33fc8ae/BR_PDF_AD_H_2015.pdf). This rate should then be put into the calculation in Part H3, paragraph 3.28. Following this the applicant can use the free tools at <https://www.uksuds.com/> to size the soakaway for the 1 in 100 (1%) plus CC event.

If infiltration fails, the same links should be used to size attenuation storage to ensure surface water runoff does not increase from the existing discharge rate.

To obtain the relevant rainfall data the applicant can visit <https://fehweb.ceh.ac.uk/> to download the point data for their site and input the csv file into the tools above.

Yours sincerely,

Flood Risk and Drainage Team

Mid Sussex District Council
