Subject: DM/25/1495 - Ecological Data Search Summary Report, Sussex Biodiversity Record Centre
Attachments: SxBRCSummaryReport_LandadjacenttoRockyLaneHaywardsHeath.pdf

Dear Hamish

Please find attached a summary report of an Ecological Data Search completed by the Sussex Biodiversity Record Centre. I have a full copy of the data which they have stated that I am unable to share. I am permitted to share this summary and can summarise information the full report contains. I provided the location of the proposed telecommunications mast on Rocky Lane, and as you will see, they have records of 163 different protected and designated species sighted within 1km of the proposed mast. They note there are 2 Local Nature Reserves, 2 Local Wildlife Sites, as well as 'Section 41 habitats and other' including Deciduous woodland, Ancient woodland and Ghyll Woodland. Their maps show that these woodland areas start at only 300 ft from the proposed site. You can see from the attached image that Fountains Wood which is very close by can be viewed on a map from the 1800s.

Please consider this information, in conjunction with all the information provided by the Environmental Health Trust, in their detailed report, 'Electromagnetic fields from power lines, cell phones, cell towers and wireless impacts the birds, bees, wildlife and our environment', which can be found at:
<https://ehtrust.org/science/bees-butterflies-wildlife-research-electromagnetic-fields-environment/>

If you require any further protected species specific information from the full report into the proposed site, please do not hesitate to contact me.

Kind regards
