By email only: Planning Department, planninginfo@midsussex.gov.uk

Thank you for requesting advice on this application from Place Services' ecological advice service. This service provides advice to planning officers to inform Mid Sussex District Council planning decisions with regard to potential ecological impacts from development. Any additional information, queries or comments on this advice that the applicant or other interested parties may have, must be directed to the Planning Officer who will seek further advice from us where appropriate and necessary.

Application: DM/25/2615
Location: Holmsted Farm Staplefield Road Cuckfield Haywards Heath
Proposal: A new vehicular access onto Cuckfield Road, including a part retrospective and part proposed internal roadway.

Thank you for consulting Place Services on the above choose an application.

No ecological objection	☐
No ecological objection subject to attached conditions	☒
Further information required/Temporary holding objection	☐
Recommend Refusal	☐
Subject to Natural England's formal comments on the conclusion of the LPA's Appropriate Assessment	☐

Summary

We have reviewed the documents supplied by the applicant and note no information has been submitted in relation to ecology other than for Biodiversity Net Gain and bespoke biodiversity enhancements.

We have also reviewed the information submitted to meet the requirements of mandatory biodiversity net gains, which includes the Biodiversity Impact Calculation Report (Libby Morris Ecologist, September 2025) and Statutory Biodiversity Metric (September 2025). We note that the Biodiversity Impact Calculation Report (Libby Morris Ecologist, September 2025) contains the Baseline Habitat Plan (Figure 3), Proposed Habitat Plan (Figure 4) and the Habitat Condition Assessments (Appendix 1).

We are satisfied that there is sufficient ecological information available to support determination of this application.

We understand from the Biodiversity Impact Calculation Report (Libby Morris Ecologist, September 2025) and Statutory Biodiversity Metric (September 2025) that the only habitats on site are modified grassland and artificial unsealed surface and therefore a further ecological report is not required.

Please note that we have no comments on Great Crested Newt as we have been instructed to leave comments on this European Protected Species to the [NatureSpace Partnership](#).

This provides certainty for the LPA of the likely impacts on designated sites, protected and Priority species & habitats and, with appropriate mitigation measures secured, the development can be made acceptable.

With regard to mandatory biodiversity net gains, it is highlighted that we support the submitted information. Biodiversity net gains is a statutory requirement set out under [Schedule 7A \(Biodiversity Gain in England\) of the Town and Country Planning Act 1990](#) and we are satisfied that submitted information provides sufficient information at application stage. As a result, a Biodiversity Gain Plan should be submitted prior to commencement, which also includes the following:

- a) A Biodiversity Gain Plan form (Ideally using the Government's template: <https://www.gov.uk/government/publications/biodiversity-gain-plan>)
- b) The completed metric calculation tool showing the calculations of the pre-development and post-intervention biodiversity values.
- c) Pre and post development habitat plans.
- d) Legal agreement(s)
- e) Biodiversity Gain Site Register reference numbers (if using off-site units).
- f) Proof of purchase (if buying statutory biodiversity credits at a last resort).

In addition, a [Habitat Management and Monitoring Plan](#) (HMMP) should be secured for all [significant on-site enhancements](#). However, we note that the post-intervention values have been provided and that no significant on-site enhancements are proposed in the proposals. As a result, we are satisfied that HMMP is not likely to be required by legal obligation or a condition of any consent for a period of up to 30 years.

However, we support the reasonable biodiversity enhancements for protected, Priority and threatened species, outlined within the Biodiversity Enhancement Strategy (Libby Morris Ecologist, September 2025), to secure net gains for species, as outlined under Paragraph 187d of the National Planning Policy Framework (December 2024). The reasonable biodiversity enhancement measures need to be outlined within a separate Biodiversity Enhancement Strategy and secured by a condition of any consent.

This will enable LPA to demonstrate its compliance with its statutory duties including its biodiversity duty under s40 NERC Act 2006 (as amended) and delivery of mandatory Biodiversity Net Gain.

Impacts will be minimised such that the proposal is acceptable, subject to the conditions below based on BS42020:2013. We recommend that submission for approval and implementation of the details below should be a condition of any planning consent.

Recommended conditions

1. ACTION REQUIRED IN ACCORDANCE WITH BIODIVERSITY ENHANCEMENT STRATEGY

“All enhancement measures and/or works shall be carried out in accordance with the details contained in the Biodiversity Enhancement Strategy (Libby Morris Ecologist, September 2025) as already submitted with the planning application and agreed in principle with the local planning authority prior to determination.

Reason: To enhance protected and Priority species and allow the LPA to discharge its duties under the NPPF 2024 and s40 of the NERC Act 2006 (as amended).

Biodiversity Gain condition

Natural England advises that the biodiversity gain condition has its own separate statutory basis, as a planning condition under [paragraph 13 of Schedule 7A of the Town and Country Planning Act 1990](#). The condition is deemed to apply to every planning permission granted for the development of land in England (unless exemptions or transitional provisions apply), and there are separate provisions governing the Biodiversity Gain Plan.

The local planning authority is strongly encouraged to not include the biodiversity gain condition, or the reasons for applying this, in the list of conditions imposed in the written notice when granting planning permission. However, it is highlighted that biodiversity gain condition could be added as an informative, using [draft text](#) provided by the Secretary of State:

“Biodiversity Net Gain

The effect of paragraph 13 of Schedule 7A to the Town and Country Planning Act 1990 is that planning permission granted for the development of land in England is deemed to have been granted subject to the condition “(the biodiversity gain condition)” that development may not begin unless:

- (a) Biodiversity Gain Plan has been submitted to the planning authority, and*
- (b) the planning authority has approved the plan.*

The planning authority, for the purposes of determining whether to approve a Biodiversity Gain Plan if one is required in respect of this permission would be Mid Sussex District Council.

There are statutory exemptions and transitional arrangements which mean that the biodiversity gain condition does not always apply. These are listed in paragraph 17 of

Schedule 7A of the Town and Country Planning Act 1990 and the Biodiversity Gain Requirements (Exemptions) Regulations 2024.

Based on the information available this permission is considered to be one which will require the approval of a biodiversity gain plan before development is begun because none of the statutory exemptions or transitional arrangements are considered to apply.”

Please do not hesitate to contact us if you have any queries in relation to this advice.

Yours sincerely,

Hamish Jackson ACIEEM BSc (Hons)
Senior Ecological Consultant
