Reasons for comment:	
Comments:	full of errors and the site is too small to be viable. The purpose of the "Parkland Reserve" or "Country Park" is confused and contradictory. On the one hand it claims to provide a recreational resource to local people whilst at the same time limiting access to enhance biodiversity. It cannot achieve both aims in such a small area because they are mutually incompatible. The special landscape qualities of the High Weald are the result of interaction between rural people and the natural landscape over centuries. It cannot be improved upon by the revolutionary imposition of a new land management regime imposed from above.

National Planning guidelines state that Biodiversity net gain should be achieved ideally at the development site itself rather than on an alternative one. Common ownership aside the two sites are quite separate and the activity in one cannot compensate logically for destructive activity in the other.

Evidence of Biodiversity Net Gain aggregated across both sites has been estimated at 18.2%. However this figure has not been provided using the objectively assessed statutory biodiversity metric but instead by desk based assessments undertaken by advisers who have no practical experience of re-wilding schemes. Sir Charles Burrell (the leading expert in re-wilding in this country) has already dismissed these plans as not serious.

The introduction of the cycle path runs close to and damages the setting of listed buildings in the area such as Old Mill cottage and Pondtail cottage.

Cyclists could also come into conflict with users of existing bridleways such as horse riders.

Once land ceases to be used for agricultural purposes, it becomes much easier to subsequently develop at a later stage. This has frequently happened elsewhere.

In short you could sum up by saying that the Fairfax proposal in terms of access to the countryside gives local people nothing they don't already have in terms of access to the countryside and its enjoyment. It is also hard to see how the current measure of biodiversity in this special area could be improved upon.

Kind regards
