Subject: Hammonds Place, Burgess Hill.

Dear Mr Gosling

We have been asked to inspect the tree stock along the front boundary of Hammonds Place, Burgess Hill.

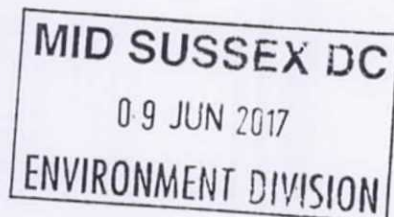

There are several mature Sycamore, Ash and a single Oak set back from the public footway within the grounds of the property. These trees are at least 4 meters back from the boundary.

There is assorted Privet, Field Maple and Laurel along the frontage forming an informal screen along the outer boundary with the footpath.

CONCLUSION.

The construction of a fence along the front boundary will have no impact on the mature trees which are all set back from the foot path and road. A small amount of the scrub may have to be trimmed in places to create a fence line. This is the case regardless of the height of any fence along this line. We can see no reason that fence of any kind or height can be erected along the frontage as it will have no impact on the tree stock.

If you require any further information please contact me.
