Subject: St Stephens Field proposals to discharge conditions

[REDACTED]

Dear Katherine,

I am surprised that developer is NOT installing solar panels despite their own report saying that they are feasible (page 13). They have plumped for air source heat pumps (with that added noise element), which are well known to use a lot of electricity so should be paired with solar panels. The neighbourhood plan policy HK11 supports sustainability.

The lack of solar panels installation at this stage is madness given the extreme climate conditions we are experiencing.

Many thanks
