

Mid Sussex District Council -
Development Control

Reference: HA-2026-127558/01
Customer reference: DM/26/0577
27 March 2026

Outline application (appearance, landscaping, layout and scale reserved), for the demolition of existing buildings and erection of up to 230 dwellings, a care home (use class c2) up to 70 beds, and community facility, and associated infrastructure including new access points off of Turners Hill Road, with associated spine road and car and cycle parking, together with provision of open space, play facilities, utilities infrastructure, surface water drainage features, and associated works

**Land West Of Turners Hill Road And North Of Huntsland Including Hurst Farm
Turners Hill Road Crawley Down West Sussex**

Dear Planning Officer,

Thank you for contacting us.

This is our response to your consultation DM/26/0577.

Environment Agency position

We have **no objection to the proposed development as submitted, provided that the following conditions be attached** to any planning permission granted.

Contamination

The previous use of these buildings/land may have left contamination which could impact on the proposed development or cause it to impact on the environment. An assessment into the past uses of buildings/land and any potential risks arising from the buildings/grounds for the proposed end use and wider environment should be carried out prior to the development works proposed. In particular investigations should take account of any oil/fuel storage tanks, septic tanks, drainage systems, and materials storage. Any identified risks should be fully evaluated, if necessary by intrusive investigations, and appropriately addressed prior to the commencement of the development.

We consider that planning permission could be granted to the proposed development as submitted if the following planning conditions are included as set out below. Without these conditions, the proposed development on this site poses an unacceptable risk to the environment and we would object to the application.

Condition – Contamination

No development approved by this planning permission shall commence until a strategy to deal with the potential risks associated with any contamination of the site has been submitted to, and approved in writing by, the Local Planning Authority. This strategy will include the following components:

1. A preliminary risk assessment which has identified:
 - all previous uses;
 - potential contaminants associated with those uses;
 - a conceptual model of the site indicating sources, pathways and receptors; and
 - potentially unacceptable risks arising from contamination at the site.
2. A site investigation scheme, based on (1) to provide information for a detailed assessment of the risk to all receptors that may be affected, including those off site.
3. The results of the site investigation and the detailed risk assessment referred to in (2) and, based on these, an options appraisal and remediation strategy giving full details of the remediation measures required and how they are to be undertaken.
4. A verification plan providing details of the data that will be collected in order to demonstrate that the works set out in the remediation strategy in (3) are complete and identifying any requirements for longer-term monitoring of pollutant linkages, maintenance and arrangements for contingency action.

Any changes to these components require the written consent of the local planning authority. The scheme shall be implemented as approved.

Reason

To ensure that the development does not contribute to, or is not put at unacceptable risk from, or adversely affected by, unacceptable levels of water pollution in line with paragraph 187 of the National Planning Policy Framework.

Note

We are satisfied that the submitted Preliminary Risk Assessment satisfies part 1 of the above condition. The PRA has recommended that further site investigation should be carried out (part 2 of above condition), with which we are in agreement. We now look forward to receiving and providing comment on this submitted site investigation.

Condition - Remediation

Prior to any part of the permitted development being occupied/brought into use, a verification report demonstrating the completion of works set out in the approved remediation strategy and the effectiveness of the remediation shall be submitted to, and approved in writing, by the local planning authority. The report shall include results of sampling and monitoring carried out in accordance with the approved verification plan to demonstrate that the site remediation criteria have been met.

Reason

To ensure that the site does not pose any further risk to human health or the water environment by demonstrating that the requirements of the approved verification plan have been met and that remediation of the site is complete. This is in line with paragraph 187 of the National Planning Policy Framework.

Condition – Unidentified contamination

If, during development, contamination not previously identified is found to be present at the site then no further development (unless otherwise agreed in writing with the Local Planning Authority) shall be carried out until a remediation strategy detailing how this contamination will be dealt with has been submitted to and approved in writing by the Local Planning Authority. The remediation strategy shall be implemented as approved.

Reason

To ensure that the development does not contribute to, or is not put at unacceptable risk from, or adversely affected by, unacceptable levels of water pollution from previously unidentified contamination sources at the development site in line with paragraph 187 of the National Planning Policy Framework.

Surface Water

Only clean uncontaminated water should drain to the surface water system. Roof drainage shall drain directly to the surface water system (entering after the pollution prevention measures). Appropriate pollution control methods (such as trapped gullies and interceptors) should be used for drainage from access roads and car parking areas to prevent hydrocarbons from entering the surface water system. There should be no discharge into land impacted by contamination or land previously identified as being contaminated. There should be no discharge to made ground. There must be no direct discharge to groundwater, a controlled water.

Condition – Drainage

No drainage systems for the infiltration of surface water drainage into the ground is permitted other than with the written consent of the Local Planning Authority. The development shall be carried out in accordance with the approved details.

Reason

To ensure that the development does not contribute to, or is not put at unacceptable risk from, or adversely affected by, unacceptable levels of water pollution caused by mobilised contaminants in line with paragraph 187 of the National Planning Policy Framework.

Piling

Piling can result in risks to groundwater quality by mobilising contamination when boring through different bedrock layers and creating preferential pathways. Thus it should be demonstrated that any proposed piling will not result in contamination of groundwater. If piling is proposed, a Piling Risk Assessment must be submitted, written in accordance with the following guidance: [Piling and Penetrative Ground Improvement Methods on Land Affected by Contamination: Guidance on Pollution Prevention](#)

Condition - Piling

Piling works or other penetrative foundation works may not commence until such time as a scheme has been submitted to, and approved in writing by, the Local Planning Authority.

The scheme shall be based on the information submitted as part of the application and, where necessary, supported by:

- Foundation Works Risk Assessment
- A conceptual site model
- Specification of the type, number and depth of proposed piles/ foundations/ dimensions of shaft/tunnel/ design of heating and cooling system
- A detailed groundwater monitoring programme including a schedule for submission of interim and final monitoring reports
- A contingency action plan including the list of potential mitigation measures that will be implemented, should unexpected changes in groundwater quality be noted as a result of decommissioning works.
- Timing/phasing arrangements.

The scheme shall be fully implemented and subsequently maintained, in accordance with the timing/phasing arrangements contained in the scheme, or any details as may subsequently be agreed, in writing, by the Local Planning Authority.

Reason

To ensure that the development does not contribute to, or is not put at unacceptable risk from, or adversely affected by, unacceptable levels of water pollution caused by mobilised contaminants in line with paragraph 187 of the National Planning Policy Framework.

Advice to applicant

Waste on Site

Excavated materials that are recovered via a treatment operation can be re-used on-site under the CL:AIRE Definition of Waste: Development Industry Code of Practice. This voluntary Code of Practice provides a framework for determining whether excavated material arising from site during remediation or land development works are waste.

Developers should ensure that all contaminated materials are adequately characterised both chemically and physically, and that the permitting status of any proposed on-site operations are clear. If in doubt, the Environment Agency should be contacted for advice at an early stage to avoid any delays.

The Environment Agency recommends that developers should refer to:

- [CL:AIRE Definition of Waste: Code of Practice](#)
- [EA Regulatory Position Statement 215](#): Treating small volumes of contaminated soil and groundwater.

If you have any questions regarding our response, please contact
