Comments Details

Commenter Type:	Neighbour or general public
Stance:	Customer objects to the Planning Application
Reasons for comment:	
Comments:	- This will put the closest properties and several children's play areas in the most intense radiation window 24 hours a day. - This can pose a significant health risk. - Although the proposed development has ICNIRP certification, this only covers the thermal health effects on people from 6 to 30 minutes exposure to a single frequency. Non-thermal effects are

not considered or covered. Many countries have actually set safety limits 10 times lower than ICNIRP (e.g. Switzerland, Italy, India, China, Russia).

- The European parliament recently reviewed 5G health impacts and concluded:

1. It was probably carcinogenic for humans
 2. It clearly affects male fertility and possibly female fertility too
 3. Has possible adverse effects on the development of embryos, fetuses and newborns.
-

Kind regards
