DM/26/0367: English Oak (T16) – Reduce Crown by 7m to just under Crown break leaving a wildlife habitat Monolith

Location: 23 Bridgers Mill, Haywards Heath West Sussex RH16 1TF

6 March 2026

Dear Ms Fletcher

My wife and I would like to place on record our **support** for the above referenced Planning Application.

For many years we have been concerned about the declining health of the above mentioned oak tree. We will be relieved to see the reduction in its height due to the diseased crown and the tree's general deterioration; not helped by the added presence of honey fungus at its base.

The oak is encompassed by other trees, it is in close proximity to Scrase Stream and neighbouring properties. In its present diseased state it has the potential of dead branches falling into the stream causing blockages and/or damage to the neighbouring properties.

Yours sincerely
