All dimensions in millimetres, unless otherwise stated.

Hobbs Field Event Space

- Mar-Key ringbeam designed to be made form concrete and laid into grassland area. Intention is that tall grass will hide these in off peak use and then the field will be cut and trimmed for events season.
- Cellpave products by Groundtrax is to be used on surfaces to be reinforced. Areas that need more reinforcement will require Cellpave HD. This will include the access road, staging area and some of the construction area. Some parts can use Cellpave 50 which is a lower strength alternative.
- Infill of the Cellpave areas will be grass predominately. Some areas that require the most strength, such as the crane pad, will be filled with type 1 crushed material.

Due to low use these will grow and disguise the grids and pathways in off peak use and then be trimmed in anticipation for use.

Toilet Block

- The proposed toilet block in Hobbs Field will be of high capacity.
