Dear Emma. / drainage dept.

As Anna is away this week please find attached the documents you have requested - direct to you.

I had issued these in February after your last request for foul and surface water updates but they seem to have fallen off the system?

Please find attached the requested documents (outlined in your response thread below).

They are...

SURFACE WATER

- Detailed MSDC drainage requirement form for discharge of condition stage
- corresponding updated FRA reports.
- Drainage map

FOUL WATER

- Detailed maps and quote form GTC, the services company installing the network that we are connecting to including the water in and foul water. (The install has already happened - we are able to connect once planning is approved).
- Foul water map from Taylor Wimpey.

Many thanks. Please contact if you need anything else.

Tony

Dear Tony

I apologise for my delay in forwarding this Drainage response, see below.

Do you have the Foul drainage information that they require?

For your information I am on Leave next week, returning on 12th May.

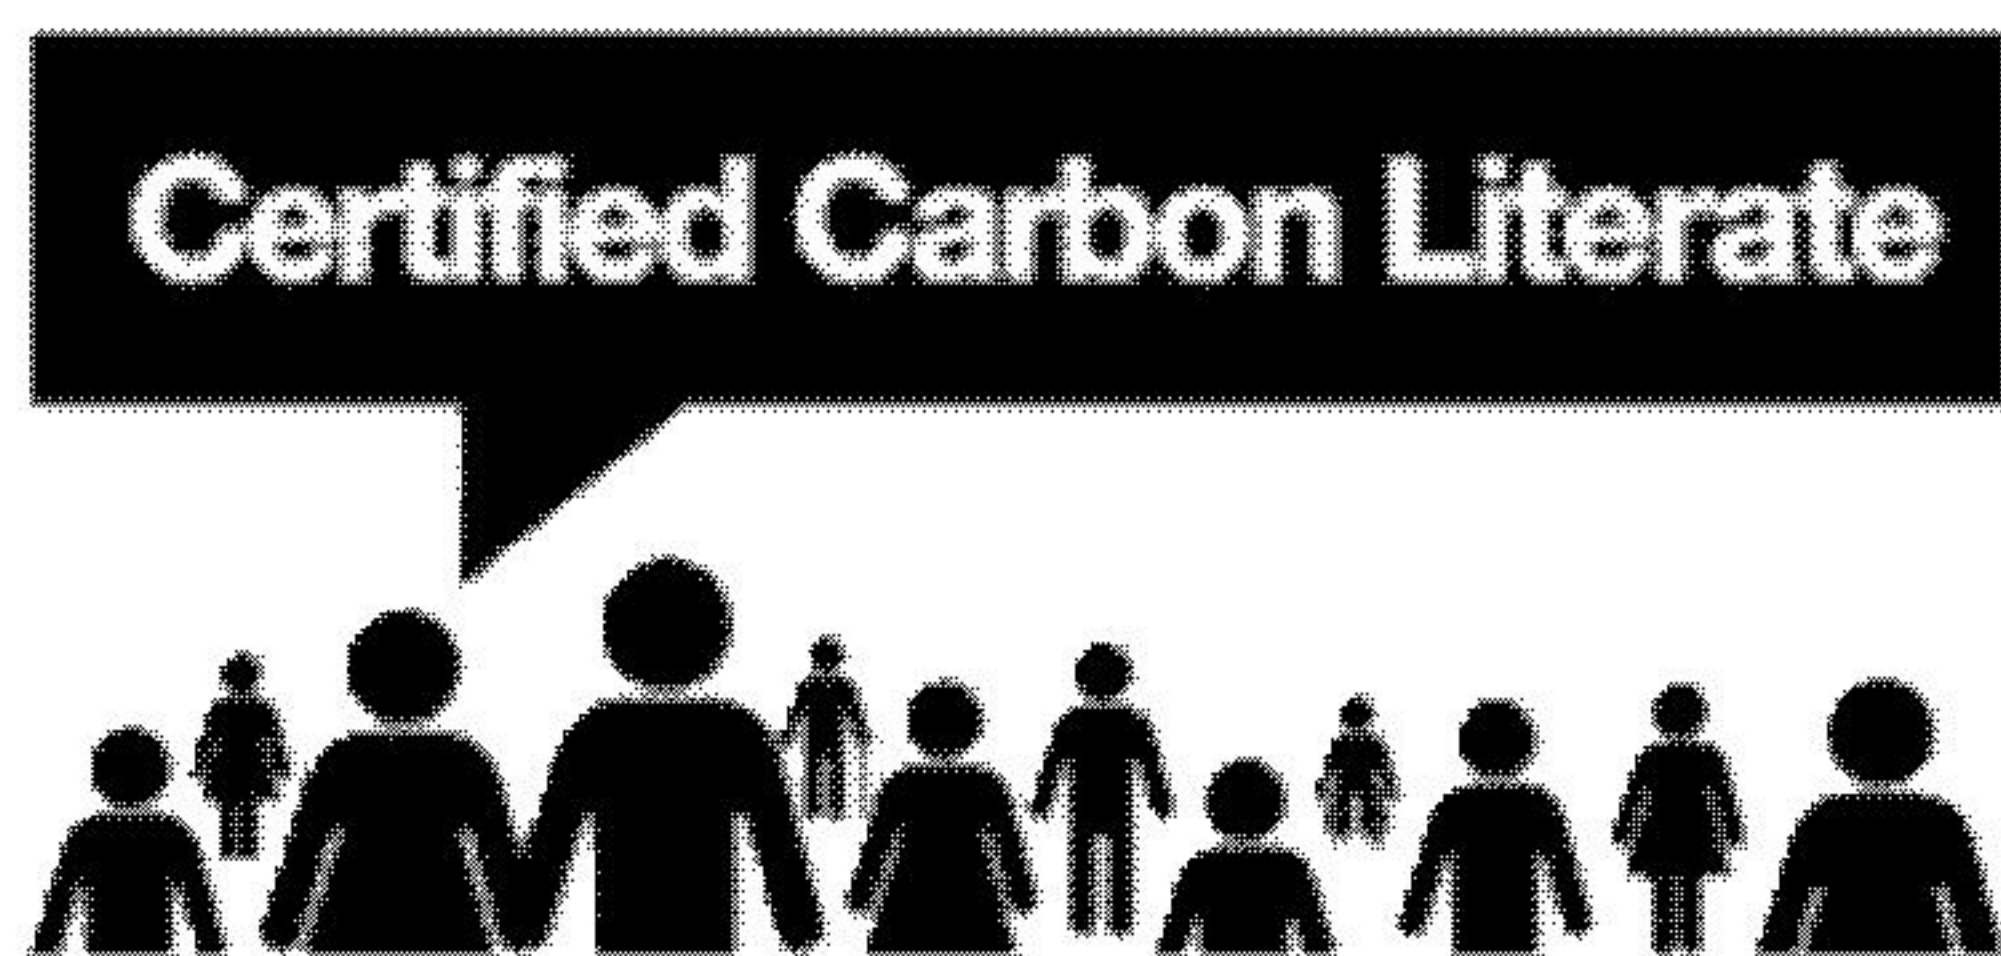

Regards

Anna

Dear Anna,

The Engineer has contacted me this afternoon, they are in review of DM/25/0240 however, they note from the email comments below that there is information on Foul Water that we don't appear to have received.

We have checked the planning portal and email trails and don't appear to have sight of this. Please could you cross check for us and send forward the information Tony mentions below. We will then be able to comment.

Many thanks
Best Wishes
Emma

Hello Anna,

Please find attached additional information from my surface water consultants as requested by the drainage team.
Attachments and message below.

I sent to you yesterday the information required for foul water from TW. I hope that was enough detail for foul water discharge.

Best.

T.

Hi Tony,

I have redone the drainage design plans with the invert and ground levels on (see attached). Also detailed the location of the information required in

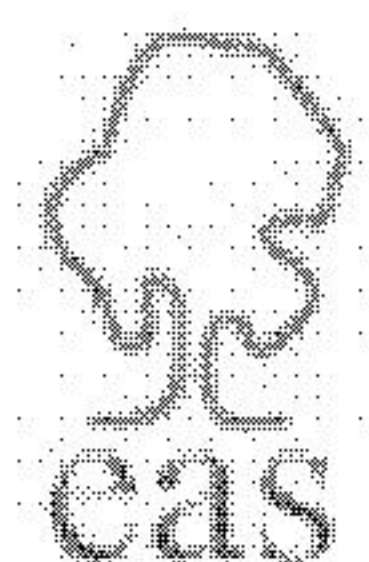

the *MSDC Requirements Form* (see attached) in the Flood Risk and Drainage Design Reports.

I have also re-attached the FRA&D reports with the updated drainage plans in.

Hopefully this will help.

Dear Tony

I attach the Drainage Engineers response, which I have received this afternoon.

Please can you address the issues that they have raised below with regards to the surface and foul water provisions for the development and provide the additional information to me for their further consideration?

Thank you.

Regards

Anna

Dear Anna,

The flood risk and drainage team have reviewed the information submitted under the above discharge of condition application (covering Condition 11 of DM/23/2688) and can provide the following comments.

We consider that insufficient information has been provided to discharge this Condition.

Surface Water

Only an operation and maintenance manual has been submitted. The applicant should submit the relevant information in line with the MSDC Detailed Drainage Design Information Guide for Discharge of Condition Stage (<https://www.midsussex.gov.uk/media/8092/detailed-drainage-design-technical-summary-version-2023-03.pdf>).

Foul Water

Foul water drainage is proposed to connect into a foul sewer. Evidence from sewer owner should be provided to determine a connection would be permissible and that there is sufficient capacity.

Following receipt of the additional information requested, we shall review and provide further comments on this application.

Best Wishes
