Subject: Planning Application DM/25/0589

[REDACTED]
I am concerned about the application because:

- The tower is of a significant height and because of height is a lattice tower and not a single pole with antennas attached.
- The tower is close to residential property.
- The technology to be used in and on the installation could be a health hazard to those people living close-by.
- An explanation is not given as to why the site chosen for this tower is the ideal location. Topography will show that it is essentially in a flat plain surrounded to a large extent by higher ground within less than 20 mile radius. Other locations away from population and possibly on higher ground could well be more suitable and less problematic.

I would like the local residents and wider population to have more information and more time to consider the proposal put forward. If the applicant was to hold a public meeting, where they could explain their proposals in more detail, that would be helpful in understanding why this site has been chosen and to address health and other concerns being expressed about the application.

Visually the installation will affect many residents. The electronics, electrics, and radio wave technology may have a harmful effect upon those living nearby, an issue that needs careful investigation and consideration,

Thank you.
