I am writing to comment on this application.

The proposed mast would be visually intrusive and out of keeping with the surrounding environment.

Its height and industrial appearance would disrupt the established character of the area, particularly given the nearby residential properties and green space.

The siting of the mast is so close to homes that will negatively affect residents enjoyment of their properties, both through its dominating presence and the potential for increased noise from associated equipment and maintenance.

The mast and cabinets would contribute to visual clutter and further erode the areas aesthetic quality.

Vulnerable people are at risk , those with medical implants or electromagnetic sensitivity .

Kind Regards
