

Condition 7 & 8 - We have closely followed the ROAVR Environmental Report (table 6.11), March 2022. The grassland was maintained at a short sward prior to development. The works carried out so far include the provision of bat boxes locally and also red start boxes - which is a red list bird that is very rare in this area. No lighting is required during the construction process and tree protection has been carried out. Deadwood habitats have been created within the adjacent woodland.
