Subject: Re: Your comments on Planning Application DM/25/3129 - Outline Planning Permission for the Erection of 125 dwellings on land At Borde Hill Lane, Haywards Heath, West Sussex

FAO: Mr J. Fanning
Environment Agency
Canal Walk, ROMSEY, Hampshire, SO51 7LP.

Dear Mr Fanning,

Issues Relating to Mid Sussex District Council Planning Application
DM/25/3129 – Land At Borde Hill Lane – Haywards Heath, West Sussex.

I refer to my emails of 26th and 27 February 2026 and your acknowledgement of 28th February 2026.

May I take this opportunity to respectfully remind you that I still await your promised substantive response? The consultation period for this planning application is fast closing (period ends 23rd March 2026), and I now fear any response will now be too late to be of any use to me, in trying to fully understand the wider implications of your original comments (Reference HA/2026/127478/01-LO1 dated 26th February 2026) in order for me to challenge certain assumptions that already seem to be being made by others directly relying on your Departments inputs. People far more important than me, actually working within the actual planning process itself - either as officials, elected representatives as Counsellors, or Members of Parliament need this input far more urgently than I do.

I urge you to please respond to all the points I raised, so that all may fully understand the true Environmental impacts of this development, especially in regards to, general drainage, potential flooding risk (including that well beyond the actual site itself – please see my earlier comments), waste water and sewage treatment, Clean water supply (already an issue with our water company's current failing infrastructure) as well as wider Environmental damage including; but not limited to noise, pollution, loss of wild life habitat, and general pollution levels.

So far it seems that undue weight is being placed on the vague promises of “mitigation” measures based solely on reports focusing purely on the impacts of the site itself, commissioned and paid for by the developer themselves, with apparently little to no independent assessments beyond this. I hope you can prove me wrong in this respect. The dictionary definition of “mitigation” provides little comfort to me in its common usage, however in this context - on this site – it simply means to me making things a little less worse than they might otherwise be, when it should be plain for all to see, that any significant development on this site (already flagged as having concerns for future development precisely because of wider drainage issues) should be subject to the intense scrutiny. The fact your original comments suggested forbidding actual occupation of any houses built until mitigation measures had been sufficiently proven at least in part acknowledges this broader concern. However, to my mind to use a common phrase, this rather seems to be putting the cart before the horse!

The net gains of building 125 new homes only to flood and cause on-going jeopardy to another 125 or more elsewhere is lost on me.

From what I have read Southern Water are saying that it will be at least another 2 years before they can even begin to bring on-line further capacity to deal with sewage treatment facilities already failing under current loads. Meanwhile, South East Water - our clean water supplier - has recently been heavily fined for failures in supply dating back over 2 years or more ago, and will still have to answer for this year's and last's far more serious regional supply issues. With what seems to be the five year cycle of Water Company corporate collapse, resulting in re-sale and reacquisition (from what almost invariably always seems to be off-shore investors) it remains to be seen if any of the forward commitments made by any of their current owners will actually be upheld or enforceable on whomsoever might take them over in the future. Even under current ownership the promised priority replacement of our current water main due in 2014 has still not taken place in 2026 and seems now to have been quietly forgotten about altogether.

It is therefore ever more vital that vital infrastructure precedes approvals, forced through on whatever new Central government building targets are being forced onto local authorities - who will ultimately be held responsible for and have to deal with the problems created by poor planning.

It is therefore ever more vital than ever that appropriate Departments of State, Agencies or whatever perverse organisational structures are created for them to operate under, take full responsibility for the professional advice they are obligated to provide.

I do hope that we will all be hearing from you shortly.

Yours sincerely,
