Morning Steven,

Thanks for sharing the information.

I will have a chat with applicant and the contamination consultant and revert back to you asap.

Many Thanks,

Scott Ellisdon

Hi Scott

I've now received the attached response from National Highways regarding the condition 2 (Construction Management Plan). Could I ask for your response to their comments please.

With regards to condition 4 (contaminated land), I have received the following comments from our Contaminated Land Officer:

'Comments: I have reviewed the submitted Contamination Risk Assessment prepared by Environmental Assessment Services Ltd, Ref: 872/Ellisdon/Leacroft/CRA, and dated May 2026, in relation to discharging Condition 4 of planning permission DM/23/1339.

The report presents the findings of an intrusive site investigation. The investigation comprises trial pitting across the site, laboratory analysis of soil samples, and a qualitative risk assessment undertaken with reference to appropriate commercial land use screening criteria. Potential contaminant linkages have been identified and assessed, and risk rated. The findings are consistent with the presence of contamination within shallow made ground across the site. The submission is therefore considered to satisfy the requirements of Condition 4(a).

Whilst the report is acceptable, it would benefit from improved clarity in the presentation of ground conditions and sampling. In particular, the inclusion of detailed trial pit logs and a clearer summary of soil strata and sampling depths would assist in supporting the interpretation of contaminant distribution and the conceptual site model. There is a impression that exceedances are only found within the made ground, and that this is approximately only 30cm in depth, but the lack of data provided makes this unclear. However, the conclusions of the report are still acceptable.

The report also includes a remediation strategy comprising removal of made ground within areas of proposed soft landscaping, placement of a geotextile membrane, and the importation of clean cover soils of up to 600 mm in planting areas. This approach is considered acceptable and would appropriately break identified pollutant linkages, ensuring the site is suitable for its proposed commercial end use, and therefore satisfies the requirements of Condition 4(b). The report also identifies the potential for contaminants to affect potable water infrastructure. The applicant should ensure that relevant contamination data is provided to the water undertaker to confirm whether barrier pipe or other protective measures are required. If not required, evidence of contact with the

undertaken should be included within the verification process. If required, photos of the implemented protective measures should be included in the verification document.

I would note the proposed cover system is relatively conservative given the nature of the development, which will be commercial, predominantly covered by buildings and hardstanding, and the identified exceedances being largely confined to shallow made ground within limited areas. A more targeted or reduced remediation approach may be achievable through further delineation, testing or refinement of the risk assessment, although this would require additional justification. The applicant may wish to consider this, as while there may added cost at this stage, the reduced scope of remediation may be more cost effective and sustainable.

The applicant is reminded that verification of the remediation scheme is required under Condition 17 of the planning permission.

On this basis, the submitted information is considered sufficient to discharge Condition 4 (parts a and b) of planning permission DM/23/1339.'

As you can see, he has suggested that there may be an opportunity for a more targeted or reduced remediation approach. Could I ask if this is something you would want to consider or are you content to proceed with the submitted details?

Dear Scott

I have received the attached consultation response from the Lead Local Flood Authority in relation to condition 3. As you can see, they have asked for further information.

I'd therefore be grateful for your response to the queries that they have raised.
