

LEGEND

TREE PROTECTION ZONE & EXCLUSION ZONE
The proposed Tree Protection Zone (TPZ) and Exclusion Zone (EZ) are shown in red. The TPZ is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The EZ is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The TPZ is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The EZ is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

GROUND PROTECTION WITHIN ROOT PROTECTION AREAS
The ground protection within the root protection areas (RPA) is shown in blue. The RPA is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The ground protection within the RPA is shown in blue. The RPA is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The ground protection within the RPA is shown in blue. The RPA is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

SENSITIVE EXCAVATION
The sensitive excavation is shown in orange. The sensitive excavation is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The sensitive excavation is shown in orange. The sensitive excavation is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The sensitive excavation is shown in orange. The sensitive excavation is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

SENSITIVE DEMOLITION
The sensitive demolition is shown in green. The sensitive demolition is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The sensitive demolition is shown in green. The sensitive demolition is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The sensitive demolition is shown in green. The sensitive demolition is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

TREE TO BE RETAINED
The tree to be retained is shown in blue. The tree to be retained is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The tree to be retained is shown in blue. The tree to be retained is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The tree to be retained is shown in blue. The tree to be retained is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

TREE TO BE REMOVED
The tree to be removed is shown in red. The tree to be removed is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The tree to be removed is shown in red. The tree to be removed is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The tree to be removed is shown in red. The tree to be removed is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

REDEVELOPMENT CANOPY TO BE REDUCED
The redevelopment canopy to be reduced is shown in green. The redevelopment canopy to be reduced is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The redevelopment canopy to be reduced is shown in green. The redevelopment canopy to be reduced is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The redevelopment canopy to be reduced is shown in green. The redevelopment canopy to be reduced is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

A CATEGORY TREE
The category tree is shown in blue. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in blue. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in blue. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

B CATEGORY TREE
The category tree is shown in red. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in red. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in red. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

C CATEGORY TREE
The category tree is shown in green. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in green. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The category tree is shown in green. The category tree is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.

ROOT PROTECTION AREA (RPA) FOR RETAINED TREES
The root protection area (RPA) for retained trees is shown in blue. The root protection area (RPA) for retained trees is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The root protection area (RPA) for retained trees is shown in blue. The root protection area (RPA) for retained trees is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed. The root protection area (RPA) for retained trees is shown in blue. The root protection area (RPA) for retained trees is the area within which any ground activity in the sub-base, including excavation, must be controlled, monitored, and managed.
