

Heritage and planning statement for installation of an electric vehicle charger at Hollybush, Standen.

Proposals

The proposed electric vehicle charger is a small black 7.5KW charger by OHME and will enable the residents to charge an electric vehicle on their gravel drive next to the front door. The charging unit will be attached to the wall of an 1980s add on to the original Victorian property. It will enable the residents to charge their EV overnight when electricity prices are considerably lower. The picture below shows the Ohme Home Pro charger that we propose to install. It is 170mm high, 200mm wide and 100mm deep

Key design features of the proposals

The proposal will not be visible to visitors of the National Trust at Standen. The EV charger will be attached to a 1980s add on to the property

The proposals will considerably reduce greenhouse gases associated with the property and we request that the officer approves the application.
