

Planning Statement for Hollybush Standen

Application for the installation of an electric vehicle charger

Electric vehicles produce considerably less greenhouse gasses than their petrol or diesel equivalents and UK residents are being encouraged to switch to electric vehicles. The current residents of Hollybush wish to follow this advice and in order to do so they need to have an electric charger on their property. They live in a rural location and there are no other chargers nearby and a charger attached to their property will be far more convenient to use in any case.

They proposed installing a small electric charger on the side of the property next to the front door. It will be off road and not be visible by the public. It will be attached to an add on to the Victorian property that was built in the 1980s when the buildings were converted from farm building to a residential property.

As the proposal does not have any real impact on the heritage value of the property the proposal is in line with listed building policies.
