

Wyllies Wood

Landscape Plan

Wyllies woods access point sits on Deaks lane. Within the High Weald national Landscape. It is typical of the local area with woods, fields, farms surrounding. The working landscape includes existing gateways and entrances into fields and woodlands for access and management purposes.

The images below indicate the current location and access entrance where improvements are proposed to enable long term sustainable woodland management.

The road and existing overgrown gateway entrance and fence can be seen.

The proposals

The proposed work would clear the overgrown vegetation from the entrance. Adjusting the entrance to include a double gate arrangement instead of a single. The fence location will be adjusted to meet the new gate location and will be of similar construction to identify and define the woodland boundary.

The stone surfaced track will be limited in length, typical of a farm or woodland access track and will be in keeping with the surrounding area. Maintaining the rural feel of the local area.

The adjustments to the entrance will have minimal impact on the landscape surrounding. Will only be visible from the section of road as is situated in the bottom of a wooded valley.
