Thank you for requesting advice on this application from Place Services' ecological advice service. This service provides advice to planning officers to inform Mid Sussex District Council planning decisions with regard to potential ecological impacts from development.

Application: DM/25/2473
Location: Warninglid Primary School Slaugham Lane Warninglid Haywards Heath
Proposal: Proposed conversion and change of use of the existing former school into two dwellings with associated garaging/car ports, removal of existing flat roofs, portacabin and other playground structures. Construction of two detached dwellings with associated garaging within the existing former school field. New entrance onto highway and associated hard and soft landscaping. (Amended plans and supporting documents received 11/06/2026, 28/05/2026, 21/05/2026, 19/05/2026, and 14/05/2026)

Thank you for re-consulting Place Services on the above application.

Subject to Natural England's formal comments on the conclusion of the LPA's Appropriate Assessment

Summary

We have reviewed the additional Biodiversity Net Gain (BNG) information submitted, including Sections 3 and 4 of the Landscape, Arboriculture and Ecology (Arborweald Environmental Planning Consultancy, updated June 2026) and the Statutory Biodiversity Metric (updated June 2026). We note that the majority of baseline habitats remain unchanged, although semi-improved grassland and broadleaved woodland have been amended as follows:

Habitat type	Habitat Units (Nov 2025)	Habitat Units (June 2026)	Change in habitat units
Semi-improved grassland	1.06	1.17	+0.11
Broadleaved woodland	0.53	0.40	-0.13

In addition, we note that there are minor changes to the new habitats created including a small reduction in buildings and vegetated gardens and a small increase in hardstanding. The overall percentage change in units now indicates a loss of -25.00% (compared to -23.60% previously) and no change in hedgerow units.

We confirm that these minor changes do not alter our previous comments, although we note the baseline habitat conditions are contained in Table 3.2 of the Landscape, Arboriculture and Ecology (Arborweald Environmental Planning Consultancy, updated June 2026). We have no other comments in addition to those provided in our response dated 10th November 2025.

As a result, we support the net gain proposals outlined and we welcome the intention of the applicant to purchase off-site units to the value of 1.29 habitat units to provide a 10%.

As a result, a Biodiversity Gain Plan should be submitted prior to commencement as part of the discharge of the statutory Biodiversity Gain Condition. This should include the following information for non-phased development:

- Biodiversity Gain Plan form, using the Government's template: <https://www.gov.uk/government/publications/biodiversity-gain-plan>.
- The completed metric calculation tool showing the calculations of the pre-development and post-intervention biodiversity values.
- Completed pre-development and post-development habitat maps.
- Information regarding [Habitat degradation](#) (where required).
- Information regarding [Irreplaceable habitat](#) (where required).

In addition, the following information may also be required depending on whether the development contains significant on-site enhancements or whether off-site options or Statutory Biodiversity Credits are required:

- A [Habitat Management and Monitoring Plan](#) (HMMP) for significant on-site enhancements or offsite measures in blue line boundary land.
- Legal agreement for monitoring and management of significant on-site enhancements or off-site measures in blue line boundary land.
- Evidence of off-site units being allocated to a Biodiversity Gain Site on the [Biodiversity Gain Site Register](#).
- Evidence of proof of purchase of Statutory Biodiversity Credits.

However, we note that the post-intervention values have been provided and that no significant on-site enhancements are proposed as the development contains minor development. As a result, we are satisfied that HMMP is not likely to be required by legal obligation or a condition of any consent for a period of up to 30 years.

We are generally satisfied that the post-intervention values are realistic and deliverable. However, it is recommended that the following matters will need to be considered by the applicant as part of the biodiversity gain condition:

- The current calculations indicate there will be a loss of onsite habitat units which is contrary to the Mid Sussex District Plan 2021-2039 DPN2, current legislation and national policy which all require an increase of 10% BNG. Therefore, we support the recommendation in the Landscape, Arboriculture and Ecology (Arborweald Environmental Planning Consultancy, updated June 2026) for the purchase of offsite biodiversity units from a habitat bank registered on the Biodiversity Gain Site Register to achieve a net gain of at least 10% and satisfy trading rules. Evidence that the offsite units have been allocated to the relevant habitat bank will be required prior to the discharge of the Biodiversity Gain Condition. Alternatively, the applicant could secure Statutory Biodiversity Credits via the Government at a last resort.

We are still satisfied that there is sufficient ecological information available to support determination of this application. However, please note we have no comments on Great Crested Newt as we have been instructed to leave comments on this European Protected Species to the [NatureSpace Partnership](#).

For clarity, we have included the conditions recommended in our response dated 10th November 2025 below.

Submission for approval and implementation of the details below should be a condition of any planning consent:

Recommended conditions

1. ACTION REQUIRED IN ACCORDANCE WITH ECOLOGICAL APPRAISAL RECOMMENDATIONS

“All mitigation and enhancement measures and/or works shall be carried out in accordance with the details contained in the Bat Emergence Survey (Arborweald Environmental Planning Consultancy, August 2025) and Landscape, Arboriculture and Ecology (Arborweald Environmental Planning Consultancy, updated June 2026), as already submitted with the planning application and agreed in principle with the local planning authority prior to determination.

This will include the appointment of an appropriately competent person e.g. an ecological clerk of works (ECoW) to provide on-site ecological expertise during construction. The appointed person shall undertake all activities, and works shall be carried out, in accordance with the approved details.”

Reason: To conserve protected and Priority species and allow the LPA to discharge its duties under the Conservation of Habitats and Species Regulations 2017 (as amended), the Wildlife & Countryside Act 1981 (as amended) and s40 of the NERC Act 2006 (as amended).

2. PRIOR TO COMMENCEMENT OF ANY WORKS WHICH WILL IMPACT THE BREEDING / RESTING PLACE OF BATS: SUBMISSION OF A COPY OF EPS MITIGATION LICENCE OR EVIDENCE OF SITE REGISTRATION UNDER A BAT MITIGATION CLASS LICENCE FOR BATS

“Any works which will impact the breeding / resting place of bats, shall not in in any circumstances commence unless the local planning authority has been provided with either:

- a) a licence issued by Natural England pursuant to Regulation 55 of The Conservation of Habitats and Species Regulations 2017 (as amended) authorizing the specified activity/development to go ahead; or*
- b) evidence of site registration supplied by an individual registered to use a Bat Mitigation or Earned Recognition Class Licence; or*
- c) a statement in writing from the Natural England to the effect that it does not consider that the specified activity/development will require a licence.”*

Reason: To conserve protected species and allow the LPA to discharge its duties under the Conservation of Habitats and Species Regulations 2017 (as amended), the Wildlife & Countryside Act 1981 (as amended) and s17 Crime & Disorder Act 1998.

3. **PRIOR TO ANY WORKS ABOVE SLAB LEVEL: BIODIVERSITY ENHANCEMENT STRATEGY**

“Prior to any works above slab level, a Biodiversity Enhancement Strategy for protected and Priority or threatened species, prepared by a suitably qualified ecologist in line with the recommendations of the Bat Emergence Survey (Arborweald Environmental Planning Consultancy, August 2025) and Landscape, Arboriculture and Ecology (Arborweald Environmental Planning Consultancy, updated June 2026), shall be submitted to and approved in writing by the local planning authority.

The content of the Biodiversity Enhancement Strategy shall include the following:

- a) Purpose and conservation objectives for the proposed enhancement measures;*
- b) detailed designs or product descriptions to achieve stated objectives;*
- c) locations of proposed enhancement measures by appropriate maps and plans (where relevant);*
- d) persons responsible for implementing the enhancement measures; and*
- e) details of initial aftercare and long-term maintenance (where relevant).*

The works shall be implemented in accordance with the approved details shall be retained in that manner thereafter.”

Reason: To enhance protected, Priority and threatened species and allow the LPA to discharge its duties under paragraph 187d of NPPF 2024 and s40 of the NERC Act 2006 (as amended).

4. **PRIOR TO OCCUPATION: WILDLIFE SENSITIVE LIGHTING DESIGN SCHEME**

“Prior to occupation, a “lighting design strategy for biodiversity in accordance with Guidance Note 08/23 (Institute of Lighting Professionals) shall be submitted to and approved in writing by the local planning authority. The strategy shall:

- a) identify those areas/features on site that are particularly sensitive for bats and that are likely to cause disturbance in or around their breeding sites and resting places or along important routes used to access key areas of their territory, for example, for foraging; and*
- b) show how and where external lighting will be installed (through provision of lighting layout plans, luminaire specifications, mounting heights, aiming angles, shielding measures, and lighting control strategies) so that it can be clearly demonstrated that areas to be lit will not disturb or prevent the above species using their territory or having access to their breeding sites and resting places.*

All external lighting shall be installed in accordance with the specifications and locations set out in the scheme and maintained thereafter in accordance with the scheme. Under no circumstances should any other external lighting be installed without prior consent from the local planning authority."

Reason: To allow the LPA to discharge its duties under the Conservation of Habitats and Species Regulations 2017 (as amended), the Wildlife & Countryside Act 1981 (as amended) and s40 of the NERC Act 2006 (as amended).

Biodiversity Gain condition

Natural England advises that the biodiversity gain condition has its own separate statutory basis, as a planning condition under [paragraph 13 of Schedule 7A of the Town and Country Planning Act 1990](#). The condition is deemed to apply to every planning permission granted for the development of land in England (unless exemptions or transitional provisions apply), and there are separate provisions governing the Biodiversity Gain Plan.

The local planning authority is strongly encouraged to not include the biodiversity gain condition, or the reasons for applying this, in the list of conditions imposed in the written notice when granting planning permission. However, it is highlighted that biodiversity gain condition could be added as an informative, using [draft text](#) provided by the Secretary of State:

"Biodiversity Net Gain

The effect of paragraph 13 of Schedule 7A to the Town and Country Planning Act 1990 is that planning permission granted for the development of land in England is deemed to have been granted subject to the condition "(the biodiversity gain condition)" that development may not begin unless:

- (a) Biodiversity Gain Plan has been submitted to the planning authority, and*
- (b) the planning authority has approved the plan.*

The planning authority, for the purposes of determining whether to approve a Biodiversity Gain Plan if one is required in respect of this permission would be Mid Sussex District Council.

There are statutory exemptions and transitional arrangements which mean that the biodiversity gain condition does not always apply. These are listed in paragraph 17 of Schedule 7A of the Town and Country Planning Act 1990 and the Biodiversity Gain Requirements (Exemptions) Regulations 2024.

Based on the information available this permission is considered to be one which will require the approval of a biodiversity gain plan before development is begun

because none of the statutory exemptions or transitional arrangements are considered to apply.”

Please do not hesitate to contact us if you have any queries in relation to this advice.

Yours sincerely,

Hamish Jackson ACIEEM BSc (Hons)
