

Conifers and Ash saplings are encroaching into carpark area and dropping debris and bird faeces onto resident's vehicles. The requested works are to cutback the Conifers and Ash back to carpark edge (the red line) would reduce the issue dramatically. Then a maintenance plan put in place to maintain the new line.

Would be reducing the overhang of the Conifers by approximately 2 to 2.2m, to carpark edge with minor cutback works being carried out to the Ash group (also a couple of self-seed Sycamores), approximately 2ft cutback to reach the desired line.
