[REDACTED]

Dear Mr Horrell,

Please find below a couple of considerations / concerns I would like to raise regarding the above referenced planning application.

Firstly, I would like you to consider the supply of utilities to the new property. As discussed my property currently suffers from inadequate electrical supply due to the extremely dated electrical infrastructure resulting in dimming and flickering lights on a daily basis but more importantly the inability to charge our EV to the extent that should be available at every domestic dwelling.

I am also aware that our neighbour has the same issue.

Secondly and a similar concern is that of the water supply. Like the electrical supply the system is overloaded already to the extent that without additional water storage tanks and a pressurising system we would not be able to use a shower at the property.

Both issues I'm told are due to the organic nature of the development of the properties located in Down Park. In the last 2 or 3 years the number of dwellings will have gone up by 2 with this new build, increasing the number of families present in an environment that was designed for a single, albeit large dwelling.

Could you please advise on the plans to be put in place to ensure the additional dwelling does not have a further detrimental impact on the existing households.

Many thanks,

The Corbels, Down Park, Turners Hill Road, Crawley Down
