Planning Services Division

We wish to object to the installation of a proposed 30 metre lattice tower comprising of 9 antennas divided into 12 cabinets as stated in your ref: DM/25/0589.

The tower, as proposed, would be situated extremely close to a significant number of residences that would be directly affected healthwise from a large increase in radioactive waves being emitted from the tower. This could ultimately increase the number of incidences of certain cancers within the population.

Overall it would have a negative effect on wildlife in the surrounding area, either by a drop in breeding of bird species, by disorientating birds in flight, bats and most forms of wildlife in general. Even at low densities there will be an impact.
It will also be an horrendous eyesore for all living nearby.

Surely if this tower is a requirement for the area, a situation could be found where it is not on top of a large number of dwellings.
