## 1.0 Introduction

- 1.1 This Technical Note has been prepared by Motion on behalf of Remmus Designer Homes in response to the Mid Sussex District Council (MSDC) Drainage comments on MSDC discharge of condition application number DM/26/0783 in **Appendix A**.

## 2.0 Response to Drainage Comments

### **A timetable for implementation should be provided**

- 2.1 Motions Drainage Report Final B Dated 9th March 2026 submitted for DM/26/0783 contained an Outline Construction Phase Plan that described an acceptable method of sequencing of the works, whereby the permanent surface and below ground drainage will be installed at the beginning of the construction phase.
- 2.2 Therefore, the programme for the drainage implementation is being coordinated alongside the wider site works. Based on the current construction sequencing, we anticipate the following:
- ▶ Discharge of any remaining planning / technical conditions: May 2026
  - ▶ Commencement of drainage works on site: 3rd August 2026
  - ▶ Completion of primary drainage infrastructure: 28th August 2026

### **Correspondence with Southern Water confirming the acceptability of the proposals is required**

- 2.3 A S106 (new sewer connection) application has been submitted to Southern Water to obtain approval for the updated Drainage Strategy in **Appendix B** of this Technical Note.
- 2.4 Please note that "SWEPT BEND CONNECTION TO PUBLIC SEWER (0.1 L/S)" has been changed to "90 DEGREE ANGLE CURVED SQUARE JUNCTION CONNECTION TO PUBLIC SEWER (0.05 L/S)" in the updated Drainage Strategy in **Appendix B**.
- 2.5 It is requested MSDC Drainage confirm that once the S106 Approval Letter is submitted for DM/26/0783, this point will be addressed.

### **The drainage calculations should demonstrate that there is no flooding for the 1 in 100 year plus climate change event**

- 2.6 In the updated Detailed Drainage Strategy and Standard Details in **Appendix B**, GEOCELLULAR SOAKAWAY and GEOCELLULAR SOAKAWAY 1 have been reduced in area to be 5m from the public road and the site boundary and the thicknesses have been increased from 0.30m with 485mm cover to 0.45m with minimum 335mm cover. The area and thickness of GEOCELLULAR STORAGE 2 has been increased to 5.5x9.0x0.40m with 355mm cover. GEOCELLULAR STORAGE 3 has been added to the drainage strategy with 315mm cover. Reference to the Maximum Load for Structural Capacity Examples in the Permavoid System Technical Bulletin Issue No: 2 July 2016 P1 indicates that the thicknesses of cover for GEOCELLULAR SOAKAWAY and GEOCELLULAR SOAKAWAY 1 are sufficient for private drives.
- 2.7 The updated InfoDrainage calculations in **Appendix C** confirm that this point is now addressed.

**Half drain times for all infiltration features should be demonstrated within the calculations and should not exceed 24 hours**

- 2.8 The half drain down time for the Type A total infiltration pervious pavement for the critical 1 in 100 year + 45 cc storm (240 mins: Winter) is 135 minutes. The half drain down time for GEOCELLULAR SOAKAWAY 1 for the critical 1 in 100 year + 45 cc storm (960 mins: Winter) is 1470 minutes, which marginally exceeds 24 hours.
- 2.9 Section 13.4.1 of CIRIA SuDS Manual 2015 states "The infiltration component should discharge from full to half-full within a reasonable time so that the risk of it not being able to manage a subsequent rainfall event is minimised. Where components are designed to manage the 1:10 year or 1:30 year event, it is usual to specify that half emptying occurs within 24 hours. If components are designed to infiltrate events greater than the 1:30 year event, designing to half empty in 24 hours can result in very large storage requirements and, with agreement from the drainage approving body, it may be appropriate to allow longer half emptying times. This decision should be based on an assessment of the performance of the system and the risk and consequences of consecutive rainfall events occurring".
- 2.10 The half drain down time for the GEOCELLULAR SOAKAWAY for the critical 1 in 100 year + 45 cc storm (1440 mins: Winter) is 4260 minutes. However, the GEOCELLULAR SOAKAWAY communicates with both GEOCELLULAR STORAGE 2 and 3, which have lesser half drain down times of 3345 and 750 minutes respectively for the 1 in 100 year + 45 cc storm (1440 mins: Winter), providing additional attenuation storage volume that allows a longer GEOCELLULAR SOAKAWAY half emptying time, ensuring a low risk should consecutive rainfall events occur. To illustrate, the cumulative Max. Resident Volume (m<sup>3</sup>) for GEOCELLULAR SOAKAWAY and GEOCELLULAR STORAGE 2 and 3 for the 2 year Critical Storm is calculated to be around 5.964m<sup>3</sup>. The Half Drain Down Time (mins) Tables in **Appendix C** show that 9.254m<sup>3</sup> will be available in the GEOCELLULAR SOAKAWAY and GEOCELLULAR STORAGE 2 and 3 twenty four hours after the critical 1 in 100 year + 45 cc storm (1440 mins: Winter) should a consecutive rainfall event occur.
- 2.11 The updated InfoDrainage calculations in **Appendix C** and Sections 2.8 to 2.10 above confirm that this point is now addressed.

**Exceedance flow routes should be clearly indicated on the drainage layout**

- 2.12 The updated Detailed Drainage Strategy in **Appendix B** confirms that this point is now addressed.

**The Ashdown Site Investigation Report should be provided**

- 2.13 Remmus Designer Homes will submit the Ashdown Site Investigation Report as part of the resubmission.
- 2.14 As stated in Section 3.9 of Motions Drainage Report Final B Dated 9th March 2026 submitted for DM/26/0783, infiltration testing in accordance with the BRE365 was undertaken in the approximate low point of the proposed surface water drainage system (TP03), and the Test Location and Results are shown in Figure 1 and Appendix D of the GEOTECHNICAL ASSESSMENT REPORT<sup>1</sup>. The ground investigation confirms that groundwater was recorded at 2.90m depth on completion of WS04; and BH01 and WS05 were recorded as dry on completion. As stated in Section 3.7 of Motions Drainage Report Final B Dated 9th March 2026 submitted for DM/26/0783, the infiltration coefficient is 0.008m/h once a factor of safety of 1.5 is applied with reference to Table 25.2 of CIRIA C753 The SuDS Manual 2015.

**Evidence should be provided to demonstrate that an appropriate allowance for urban creep has been included within the calculations**

- 2.15 The updated InfoDrainage calculations in **Appendix C** confirm that 10% allowance for urban creep has been added to the proposed main roof areas.

---

<sup>1</sup> Ashdown Site Investigation, GEOTECHNICAL ASSESSMENT REPORT, PROJECT REFERENCE: P17576, REPORT REFERENCE: R17049, Issue No. 1, Dated 26th February 2026

### **It should be demonstrated that sufficient pollution mitigation has been provided**

- 2.16 Table 4.3 of CIRIA SuDS Manual 2015 rates the pollution hazard from roof water runoff as 'Very low'. The only requirement for roof water runoff is the removal of gross solids and sediments, which would be achieved using catchpits and silt traps.
- 2.17 With regards to the proposed driveway and parking areas, Table 4.3 of CIRIA SuDS Manual 2015 rates the pollution hazard from Individual property driveways, residential car parks and low traffic roads as 'Low'. To mitigate a 'Low' pollution hazard, CIRIA SuDS Manual 2015 recommends using a simple index approach in line with Section 26.7.1.
- 2.18 Table 26.4 of CIRIA SuDS Manual 2015 shows indicative SuDS mitigation indices for discharges to groundwater - that exceed those of the 'Low' pollution hazard level in Table 26.2 - for a Constructed permeable pavement where a suitable filtration layer is included that provides treatment, and including a geotextile at the base separating the foundation from the subgrade) underlain by a soil with good contaminant attenuation potential of at least 300 mm in depth.
- 2.19 The updated Standard Details in **Appendix B** confirms that this point is now addressed.

### **Invert and cover levels of all drainage features should be clearly shown on the drainage Layout**

- 2.20 The manhole schedule in the updated Drainage Strategy in **Appendix B** confirms that this point is now addressed.

### **Evidence should be provided to confirm that a Cv value of 1 has been utilised within the drainage calculations**

- 2.21 The updated InfoDrainage calculations in **Appendix C** confirm that a Cv value of 1 has been utilised for all catchment areas.

### **It should be demonstrated that the soakaways have sufficient offsets from boundaries, highways and dwellings**

- 2.22 The updated Drainage Strategy in **Appendix B** confirms that this point is now addressed.

## **3.0 Conclusion**

- 3.1 A S106 (new sewer connection) application has been submitted to Southern Water to obtain approval for the updated Drainage Strategy in **Appendix B** of this Technical Note. It is requested MSDC Drainage confirm that once the S106 Approval Letter is submitted for DM/26/0783, this point will be addressed.
- 3.2 CIRIA SuDS Manual 2015, states "Infiltration viability should be given full consideration where rates of  $10^{-6}$  m/s or greater exist on the site (subject to geotechnical and contamination considerations). Where rates are less than that, the soils can still usefully be used for Interception delivery, but disposal of significant volumes of runoff may not be cost-effective or appropriate, unless there is a large area of land available for this purpose".
- 3.3 As stated in Section 3.7 of Motions Drainage Report Final B Dated 9th March 2026 submitted for DM/26/0783, the infiltration coefficient is 0.008m/h once a factor of safety of 1.5 is applied with reference to Table 25.2 of CIRIA C753 The SuDS Manual 2015. Therefore, it is necessary for the GEOCELLULAR SOAKAWAY with a half drain down time in excess of 24 hours to communicate with both GEOCELLULAR STORAGE 2 and 3 to ensure a low risk should a consecutive rainfall event occur.

- 3.4 In conclusion, Motion has worked through the MSDC drainage comments and provided the information required. As such, flood risk and foul and surface water management should not form an impediment to the progress of the discharge of condition application for this development.

## Appendix A

MSDC Drainage comments on the MSDC discharge of condition application number  
DM/26/0783

**From:** drainage <drainage@midsussex.gov.uk>  
**Sent:** 17 April 2026 11:41:14 UTC+01:00

**Cc:** "drainage" <drainage@midsussex.gov.uk>  
**Subject:** 2026.04.17 Re: DM/26/0783 - Land Adjacent To Hilgay Cottage, Birchwood Grove Road, Burgess Hill  
**Attachments:** MSDC002 - Detailed Drainage Design Checklist - v2.0 issued 071125.pdf, MSDC002 - Detailed Drainage Design Technical Summary - v2.0 issued 071125.pdf

Dear Anna,

The Flood Risk and Drainage Tema have reviewed the submitted information and have the following comments:

It is proposed for surface water to discharge via type A total infiltration pervious pavement and three soakaways. It is proposed for foul water to discharge to sewer.

- A timetable for implementation should be provided.
- Correspondence with Southern Water confirming the acceptability of the proposals is required.
- The drainage calculations should demonstrate that there is no flooding for the 1 in 100 year plus climate change event.
- Half drain times for all infiltration features should be demonstrated within the calculations and should not exceed 24 hours.
- Exceedance flow routes should be clearly indicated on the drainage layout.
- The Ashdown Site Investigation Report should be provided.
- Evidence should be provided to demonstrate that an appropriate allowance for urban creep has been included within the calculations.
- It should be demonstrated that sufficient pollution mitigation has been provided.
- Invert and cover levels of all drainage features should be clearly shown on the drainage layout.
- Evidence should be provided to confirm that a Cv value of 1 has been utilised within the drainage calculations.
- It should be demonstrated that the soakaways have sufficient offsets from boundaries, highways and dwellings.

The Application should refer to the MSDC Detailed Drainage Design Information Guide for Discharge of Condition Stage (<https://www.midsussex.gov.uk/media/yyxere1u/msdc002-detailed-drainage-design-checklist-v20-issued-071125.pdf>) for further guidance (also attached).

Upon receipt of this additional information, we will be able to comment further. Receipt of the requested additional information does not mean further information will not be requested.

Best Wishes

**Flood Risk and Drainage Team**

**Estate Services and Building Control**  
**Mid Sussex District Council**

### Pervious Pavement Construction Overlying Geocellular Soakaway

Notes with reference to Motion Drawing 2403090-0501-P06 [Detailed Drainage Strategy]:

- Geocellular Soakaway to be suitable for minimum 335mm cover.
- Geocellular Soakaway 1 to be suitable for minimum 365mm cover.
- Geocellular Soakaway 1 to be completely wrapped in a heavy duty non-woven thermally bonded permeable geotextile to permit infiltration between the overlying and adjacent pervious pavement sub-base and the natural ground at the sides and base. Geocellular Soakaway 1 to also have 100mm Type 2/6mm Sharp Grit or Clean Sand at the sides and base external to the geotextile where interacting with the natural ground.
- Geocellular Soakaway to be completely wrapped in a heavy duty non-woven thermally bonded permeable geotextile and to also have 100mm Type 2/6mm Sharp Grit or Clean Sand surround external to the geotextile.
- Geocellular Storage 2 and 3 to be suitable for minimum 300mm cover and to be completely wrapped in an impermeable separating geomembrane.
- Geocellular Storage 2 and 3 to also have as-dug backfill (Figure 21.4 of the CIRIA SuDS Manual) at the sides and a 'Sand blinding / bedding layer' (Figure 21.4 of the CIRIA SuDS Manual) at the base external to the impermeable separating geomembrane.

| CBR Table 2 |                                                                                                                  |
|-------------|------------------------------------------------------------------------------------------------------------------|
| CBR (%)     | Capping Thickness (mm)                                                                                           |
| ≤2.0        | Subgrade improvement                                                                                             |
| 2.0-3.0     | Subgrade improvement layer (may be incorporated into capping layer to provide a total layer thickness of 350 mm) |
| 3.0-4.0     | 225mm capping                                                                                                    |
| 4.0-5.0     | 150mm capping                                                                                                    |

Notes:

- The contractor is to carry out CBR testing at formation levels. The results are to be issued to the Engineer in order to determine capping requirements.
- For frost susceptible subgrade materials the minimum depth of construction shall be 450mm.
- Table 2 is based on Interpave's design & construction of concrete block permeable pavements - 8.8 Adjustment for low CBR

### SECTION B-B Scale (1:75)

### Permavoid Diffuser Unit Connection Detail

### Notes

- All levels and dimensions to be checked on site before any work commences. All dimensions in metres unless stated otherwise.
- 
- Any discrepancies should be reported to the engineer immediately, so that clarification can be sought prior to the commencement of works.
- This drawing should be read in conjunction with all other relevant engineering details, drawings and specification.
