

## **Para 7: Identification of Tree(s) and Description of Work**

Please refer to the Tree Inspection and report provided by Mr Antony Geer MCIHort (TechAhorA)

My plan is to remove the large Lawson Cypress tree (Felled) listed in the report by Antony Geer. In addition, I wish to remove the line of five Leylandii trees adjacent to the Lawson Cypress. Unfortunately, due to a misunderstanding (my fault) these have not been included in the report. However, Mr Geer has confirmed to me that due to their advanced deterioration they need to be removed (Felled) and does not believe an additional report from him would be required.

The trees are situated on a 30-degree slope leaning towards the road at the front of the property. Once cleared I plan to landscape the area with primarily ground covering shrubs such as Vinca Periwinkle Major and Minor plus a variety of Sedum plants such as Sunshine and Little Missy. In addition, I will be looking to plant three low growing trees such as Weigela Florida 'Monet' I will be seeking further advice from a local Gardening and Landscape Specialist regarding this.

It may be necessary to plant a row of Hornbeam or Beech hedging plants along the top of the slope to provide additional security and privacy, this will be determined once the site has been cleared and an assessment made.

Once this has been completed it will be easier to maintain and enjoyable for everyone using Church Lane to see.

Rod Smith
