Hello Aurelie.

You will need a structural slab to provide a barrier to rising flood water. A floor void will just fill up. Sketch drawing attached. The concrete upstand should be as high as the floor risk and then 150mm extra. Wykamol Sureproof is a self-adhesive sheet membrane, Wykamol Hydradry is a wet applied waterproof 'tanking' coating.

Typical detail WYK-SD 050 shows the internal treatment of the existing cavity wall. [REDACTED]

Regards

Mike Dunn CSSW Technical Manager South
