## Biodiversity net gain

Biodiversity net gain is a legal requirement for planning permission introduced on 12 February 2024. All applications are required to either provide detailed information proving there will be a biodiversity increase; or explain why the requirement does not apply to the development.

Do you believe that, if the development is granted permission, the general Biodiversity Gain Condition (as set out in [Paragraph 13 of Schedule 7A of the Town and Country Planning Act 1990 \(as amended\)](#)) would apply?

☐ Yes

☒ No

Biodiversity net gain has been introduced as a general condition for planning permission. As set out in [The Environment Act 2021](#): "grants of planning permission in England [are] to be subject to a condition to secure that the biodiversity gain objective is met". Therefore, in England, all planning permissions are generally subject to biodiversity gain rules, unless they are specifically exempt or out of scope.

If you have stated that the biodiversity net gain requirement does not apply to your application you must provide the reason(s) why, and may also need to supply evidence (especially where you believe the application is eligible for the 'de minimis' exemption).

**Reason biodiversity net gain does not apply:**

Development subject to the de minimis exemption (development below the threshold)

**What best describes the size of your site?:**

Under 25 square metres

**Please justify the reason why biodiversity net gain does not apply:**

The total site area is 4.78 hectares. At first sight, this might suggest that a biodiversity net gain (BNG) assessment is required. However, the proposed works do not fall within the scope of development that triggers the statutory BNG requirement, for the following reasons: No material habitat loss. The track repair works will be undertaken wholly within the existing footprint. Verges and hedgerows will be avoided, and only minimal, temporary vegetation clearance is required, which will naturally regenerate without intervention. These works constitute maintenance rather than redevelopment and will result in no measurable change in biodiversity value. Temporary works with reinstatement. The installation of land drainage will involve disturbance of the Recreation Ground surface during construction only. Following completion, the surface will be reinstated and overseeded. As the land is restored to its existing condition, there is no permanent change to land use or biodiversity value. De minimis scale of new development. The only element of new development is the proposed extension to the path along the northwest boundary. This amounts to approximately 6 square metres—less than 0.01% of the total site area. This falls within the de minimis provisions of the planning legislation and does not result in a measurable loss of biodiversity. In conclusion, the statutory requirement for biodiversity net gain applies only when development proposals result in a measurable biodiversity impact. In this case: 1) the works largely comprise maintenance and reinstatement, 2) no priority habitats are affected, and 3) the sole new development element is of such minimal scale that it is exempt. Accordingly, a biodiversity net gain assessment does not apply to this application.

Note: Please read the help text for further information why developments may be exempt or not in scope.
