Dear Susan,

Thank you for consulting the Flood Risk and Drainage Team on the above application.

Upon review of received information's, it is proposed that surface water will discharge to a ditch to the east of the site at an attenuated rate, while foul water will discharge to an existing sewer located outside of the site boundary.

The Flood Risk and Drainage Team are satisfied that sufficient information has now been provided for Condition 3 and therefore we have no objections.

Note: It appears that not all the information we have reviewed throughout the application process has been uploaded to the planning portal.

Best Wishes

Flood Risk and Drainage Team
