

DESIGN & ACCESS STATEMENT

Site: 35 The Wickets, Burgess Hill

Context

This is a Design and Access Statement in accordance with statutory requirements and subsequent guidance.

This statement accompanies and supports an application being made to Mid Sussex District Council in respect of a single storey detached annexe building in the rear garden of the property. The overall increase in footprint and massing is modest compared to the existing property and the garden area which exists.

The proposal has been carefully designed so as to respect the local environment, accord with relevant adopted development plan policies and provide an appropriate building in this location.

Amount

Currently the site consists of the existing dwelling, hardstanding and curtilage. The size is set within policy objectives and is close to the town of Burgess Hill, please see the included proposed drawings, and site and location plans.

Layout

There is currently ample garden for the property, with the main garden areas to the west of the property.

Very careful consideration has been given to the position of the building, in order to maintain the majority of the rear garden area. In particular the design and location of the proposal, ensures that the setting and impact on the neighbouring properties is no worse, this is assisted by the retention of all the existing boundary hedges and fences.

The layout ensures optimum accessibility to the existing and future occupiers of the dwelling with good access throughout and the proposal has been designed to retain the safe environment for residents.

Scale

The application site is within the town of Burgess Hill. The scale of the proposal has been specifically designed to relate to the character of the existing neighbouring property, which has constructed a similar building.

The proposal will create a living area and en-suite shower room for the applicants teenagers, which is larger enough to accommodate a bed and a small living area.

Landscaping

The design takes into account all the features within the site, with the retention of the screen boundary hedges and fences, with the only neighbour being to the north of the property. Therefore the existing curtilage will be retained and the relationship between this and the proposal will remain with the current ratio.

Appearance and Design

I have taken into account maintaining the visual aspect of the area respecting both the bulk and scale of the neighbours outbuilding. We have been very careful when considering and designing the proposal, in order to design the building which will be in keeping with this building in the choice of materials, such as natural horizontal boarding to the four elevations. This will accord with the individual distinctiveness of the property and immediate area.

Access

Parking provision is included in the layout as existing, with parking for 2 cars to the front of the property. There is sufficient space to enable emergency vehicles to easily reach the property. The site is on fairly level ground therefore pedestrian access is easily accessible to the front and rear entrances from the parking area.

History and Policy Approach

This proposal is proportionate in both scale and massing when compared to the existing dwelling and most of the neighbouring properties. Full consideration has been given to determining the scale and detailed design with regard to Government Guidance and Statements and Local Development Plan Policies.

Conclusion

This proposal is an appropriate response for my clients to create a larger and more usable dwelling for their needs. We have emphasised that the scheme has been carefully designed, to ensure it meets the aims and objectives of policy guidance and represents an environmentally sound development, this is achieved with good quality modern design.
