Dear Joanne,

I refer to your email of 9th October in respect of the above.

The Applicant's drainage consultant (Dixon Hurst Limited [DHL]) have now had the opportunity to review the comments received, including the 4 bullet points in your recent email, and they have provided the following response (Dixon Hurst Limited comments in **red text**, which refer to previously submitted information):

MSDC: The infiltration testing should also be carried out at the same invert level as the base of the proposed infiltration feature;

Dixon Hurst response: Our assessment of the original trial pit soakaway test undertaken indicated the upper ground strata have a calculated infiltration rate of approximately 8 .54 10⁻⁶ m/s. Please refer to pages 53-54 in the drainage calculations.

MSDC: A range of run times and storm durations should also be presented for the network calculations;

Dixon Hurst response: We have provided Micro Drainage calculation for the 1 in 1 year , 1 in 30 years and 1 in 100 years + 45% climate change for the attenuation tank , rain garden together with the combined design simulation of the attenuation tank and rain garden. The flow rate from the attenuation have been restricted to Greenfield discharge QBar 0.4 l/s.

MSDC: Evidence should be provided that the rain garden has a half drain time of less 24 hours when the attenuation tank is discharging into it;

Dixon Hurst response: Please refer to the 1 in 100 years+45% Micro Drainage calculations for attenuation tank and rain garden the half drain times are 347 minutes and 136 minutes respectively.

MSDC: Further details regarding how the orifice plate flow control on the rain garden should be provided.

Dixon Hurst response: Please refer to DHL drawing No. 11 Sheet 2 of 2 , Shows a section through attenuation tank, orifice flow control and rain garden. The orifice plate diameter is provided in the Micro Drainage calculations for attenuation.

We would be very grateful if you could review this information as soon as possible. As we have highlighted in our previous correspondence, our Client is due to commence works on site imminently. Therefore please could ensure that this last remaining drainage matter is prioritised, and hopefully you will be in a position to confirm that the condition is discharged no later than Friday 17th October.

We look forward to hearing from you.

Best regards,

Tim

Subject: RE: URGENT - DM/25/1535 - Twinham, 34 Hurst Road

Dear Tim,

I note the contents of your email of Tuesday and appreciate your frustration on the request for further additional information to address the drainage condition.

Having looked at the letter I sent I consider that it clearly sets out the further information that is required in respect of:

- The infiltration testing should also be carried out at the same invert level as the base of the proposed infiltration feature;
- A range of run times and storm durations should also be presented for the network calculations;
- Evidence should be provided that the rain garden has a half drain time of less 24 hours when the attenuation tank is discharging into it;
- Further details regarding how the orifice plate flow control on the rain garden should be provided.

I note that you have requested a call between the Councils Drainage Consultants and Dixon Hurst to discuss what is exactly required to address the further information request and discharge the condition. Unfortunately, we no longer offer this service to allow direct discussions and queries have to come through the case officer.

Within the Planning section of the Councils website, there is a section on Flood Risk and Drainage for Planning. On this page it sets out a checklist for the information which is required to be submitted at the discharge of conditions stage which has been provided by the Flood Risk & Drainage Team: [Flood Risk and Drainage for Planning - Mid Sussex District Council](#)

I appreciate this may be disappointing; however, I trust it sets the position in respect of the discharge of condition process.

Kind regards

Joanne

Subject: URGENT - DM/25/1535 - Twinham, 34 Hurst Road

Dear Joanne,

I refer to your recent correspondence in respect of the ongoing Discharge of Conditions application for the new dwelling adjacent to Twinham at 34 Hurst Road in Hassocks.

It is good news that Condition 11 (ecology/lighting) has been confirmed as discharged. However, it is extremely frustrating that the drainage condition (no.4) remains unresolved.

Following our submission of the Discharge of Conditions application to MSDC in June, we originally received a request for further information from the Council's Drainage Engineer on 21st July, and following additional submissions from the Applicant's Drainage Consultants (Dixon Hurst) we have received further requests for more information/clarification from the

Council's Drainage Engineers on 26th August, and then again today. We do feel this could have all been dealt with a lot quicker and without the expense and uncertainty it has created if Dixon Hurst could have had the opportunity to speak directly with the Council's Drainage Engineers. As it stands it does feel like we are going around in circles in respect of this one outstanding matter. As I have previously explained, this is having a huge impact on our Client's intended construction programme, and a consequence of these delays is an unplanned and significant financial outlay. In order to expedite matters moving forward and to avoid any further delays, we consider that this case now warrants a phone call/meeting between Dixon Hurst and the Council's Drainage Engineer. This would allow the drainage specialists to agree what exactly is required to allow the condition to be discharged quickly. We would be extremely grateful if you could arrange for this at the earliest opportunity. If helpful/required, then the meeting could be on Teams with you and I present also?

We look forward to receiving your response as soon as possible.

Best regards,

Tim

Dear Tim,

Please find attached my response in respect of conditions 4 and 11.

In light of additional information being required in respect of condition 4 a further extension of time will need to be agreed to allow the submission and full and fair consideration of this in consultation with the Council's Drainage Engineer.

Kind regards

Joanne
