Thank you for requesting advice on this application from Place Services' ecological advice service. This service provides advice to planning officers to inform Mid Sussex District Council planning decisions with regard to potential ecological impacts from development. Any additional information, queries or comments on this advice that the applicant or other interested parties may have, must be directed to the Planning Officer who will seek further advice from us where appropriate and necessary.

Application: DM/25/0214
Location: Land To The Rear Of 43 Wivelsfield Road Haywards Heath West Sussex RH16 4EN
Proposal: Demolition of existing car port and construction of three bed dwelling with associated landscaping.

Thank you for re-consulting Place Services on the above application.

Summary

As stated in our response dated 29th April 2025, we have reviewed the existing garage elevations (March 2025) relating to the likely impacts of development on designated sites, protected and Priority species & habitats and identification of appropriate mitigation

measures. Having viewed the photographs in the drawing 'existing garage elevations (March 2025)' we are satisfied that the structure is partly open sided, and therefore a Preliminary Roost Assessment (PRA) for bats is not required.

We have also reviewed the information submitted to demonstrate that Biodiversity Net Gain can be delivered within the timescale promised and to meet any mandatory BNG requirements required. This includes the Biodiversity Gain Plan (June 2025), Small Sites Metric (June 2025) and Pre-Development Baseline Map and Post Development Map.

We are now satisfied that there is sufficient ecological information available for determination. However, please note we have no comments on Great Crested Newt as we have been instructed to leave comments on this European Protected Species to the [NatureSpace Partnership](#).

This provides certainty for the LPA of the likely impacts on protected and Priority species and, with appropriate mitigation measures secured, the development can be made acceptable.

Further to our response dated 12th June 2025 and with regard to mandatory biodiversity net gains, it is highlighted that we now support the submitted updated Small Sites Metric (June 2025) as this now includes baseline habitats of unvegetated and vegetated garden, sealed surface and one urban/rural tree, as requested in our response. Biodiversity net gains is a statutory requirement set out under [Schedule 7A \(Biodiversity Gain in England\) of the Town and Country Planning Act 1990](#) and we are satisfied that submitted information provides sufficient information at application stage. As a result, a Biodiversity Gain Plan should be submitted prior to commencement, which also includes the following:

- a) The completed metric calculation tool showing the calculations of the pre-development and post-intervention biodiversity values.
- b) Pre and post development habitat plans.
- c) Legal agreement(s)
- d) Biodiversity Gain Site Register reference numbers (if using off-site units).
- e) Proof of purchase (if buying statutory biodiversity credits at a last resort).

In addition, a [Habitat Management and Monitoring Plan](#) (HMMP) should be secured for all [significant on-site enhancements](#). However, we are satisfied that no significant on-site enhancements are proposed. Therefore, a HMMP is not required as part of the Biodiversity Gain Condition.

We also recommend that reasonable biodiversity enhancements for protected, Priority and threatened species should be identified and implemented to secure net gains for biodiversity, as outlined under Paragraph 187d and 193d of the National Planning Policy Framework (December 2024). The reasonable biodiversity enhancement measures needs to be outlined within a separate Biodiversity Enhancement Strategy and secured by a condition of any consent.

This will enable LPA to demonstrate its compliance with its statutory duties including its biodiversity duty under s40 NERC Act 2006 (as amended) and delivery of mandatory Biodiversity Net Gain.

Impacts will be minimised such that the proposal is acceptable, subject to the conditions below based on BS42020:2013. We recommend that submission for approval and implementation of the details below should be a condition of any planning consent.

Recommended conditions

1. PRIOR TO ANY WORKS ABOVE SLAB LEVEL: BIODIVERSITY ENHANCEMENT STRATEGY

“Prior to any works above slab level, a Biodiversity Enhancement Strategy for protected, Priority and threatened species, prepared by a suitably qualified ecologist, shall be submitted to and approved in writing by the local planning authority.

The content of the Biodiversity Enhancement Strategy shall include the following:

- a) Purpose and conservation objectives for the proposed enhancement measures;*
- b) detailed designs or product descriptions to achieve stated objectives;*
- c) locations of proposed enhancement measures by appropriate maps and plans (where relevant);*
- d) persons responsible for implementing the enhancement measures; and*
- e) details of initial aftercare and long-term maintenance (where relevant).*

The works shall be implemented in accordance with the approved details shall be retained in that manner thereafter.”

Reason: To enhance protected, Priority and threatened species and allow the LPA to discharge its duties under paragraph 187d of NPPF 2024 and s40 of the NERC Act 2006 (as amended).

Biodiversity Gain condition

Natural England advises that the biodiversity gain condition has its own separate statutory basis, as a planning condition under [paragraph 13 of Schedule 7A of the Town and Country Planning Act 1990](#). The condition is deemed to apply to every planning permission granted for the development of land in England (unless exemptions or transitional provisions apply), and there are separate provisions governing the Biodiversity Gain Plan.

The local planning authority is strongly encouraged to not include the biodiversity gain condition, or the reasons for applying this, in the list of conditions imposed in the written notice when granting planning permission. However, it is highlighted that biodiversity gain condition could be added as an informative, using [draft text](#) provided by the Secretary of State:

“Biodiversity Net Gain

The effect of paragraph 13 of Schedule 7A to the Town and Country Planning Act 1990 is that planning permission granted for the development of land in England is deemed to have been granted subject to the condition “(the biodiversity gain condition)” that development may not begin unless:

- (a) a Biodiversity Gain Plan has been submitted to the planning authority, and*
- (b) the planning authority has approved the plan.*

The planning authority, for the purposes of determining whether to approve a Biodiversity Gain Plan if one is required in respect of this permission would be Mid Sussex District Council.

There are statutory exemptions and transitional arrangements which mean that the biodiversity gain condition does not always apply. These are listed in paragraph 17 of Schedule 7A of the Town and Country Planning Act 1990 and the Biodiversity Gain Requirements (Exemptions) Regulations 2024.

Based on the information available this permission is considered to be one which will require the approval of a biodiversity gain plan before development is begun because none of the statutory exemptions or transitional arrangements are considered to apply.”

Please do not hesitate to contact us if you have any queries in relation to this advice.

Yours sincerely,

Hamish Jackson ACIEEM BSc (Hons)
