Subject: RE: Planning Notice DM/25/0589

[REDACTED]

The revised application reduces the number of antennas to 6 and indicates connectivity will be into a box on the railway embankment above the proposed site. There do not appear to be any other changes.

I consider that the comments contained in my submission of 28 March remain pertinent, and I have the following to add:-

- Although connectivity proposals have changed, it is not clear how wider connectivity to the proposed box on the railway embankment will be achieved.
- Whilst the number of antennas has dropped from 9 to 6, the tower remains an absolute monstrosity, and surely cannot be approved on land that I believe to be protected.

If this application is given approval, I have no doubt that there will be a subsequent amendment revising the number of antennas upwards!

It remains an indisputable fact that the proposed location for a thirty metre high lattice tower is entirely inappropriate and should be rejected out of hand by MDSC.
