Commenter Type:	Neighbour or general public
Stance:	Customer made comments in support of the Planning Application
Reasons for comment:	
Comments:	In my view, the proposal represents a practical and well considered use of currently underutilised land. In particular the proposed parking system offers a visually unobtrusive solution whilst maintaining as much of a natural appearance as possible. The proposed approach is better, from an environmental perspective, than a permanent hard standing. Onsite parking on this scale must be good for local parking and traffic management. The benefits of holding these events, to the local and wider community, and making them more sustainable in

the manner proposed, are significant. They include: generation of charitable donations, attractive seasonal celebrations, community gatherings, and the facilitation of improved society cohesion. The proposal to provide the facilities to enable these events, strikes a sensible balance between permanence and flexibility. Safety and efficiency seem to be key to what is being proposed along with ensuring the site retains flexibility and adaptability whilst guarding against overdevelopment.

Kind regards
