Details of intentions of work at 29 Oathall Road

T1 - Salix alba (White Willow). Rear of property Western aspect, medium sized tree, growing on the boundary of 29 Oathall. Applying to Fell/Dismantle to ground level to reduce competition with neighbouring Mature Yew tree

T2 - Ilex aquifolium 'Golden King' (Holly). rear of property, Northern aspect. Small specimen, standing at 9m. Applying to reduce the height by 30.0 %, leaving the finish height at an estimated 6m. Aiming to encourage a more compact crown and reduce overhang into the garden

T3 - Ilex aquifolium (Holly). Rear of property, Central in the rear garden. Medium specimen which splits into two co-dominant stems at roughly 3m, finish height at roughly 11m . Applying for 50.0 % reduction, leaving suitable sub dominant growth to encourage a more compact crown and reduce wind thrown failure. Also to reduce impact and competition of the neighbouring Persian Ironwood. Leaving the finish height at roughly 6m. ■

T4 - Tilia platyphyllos (Large-Leaved Lime). Rear of property, Eastern aspect. Pollard to previous points. Aiming to keep the tree at a manageable size. Last Pollard was applied for and carried out in 2020.

T5 - Fagus sylvatica fastigiata (Fastigate Beech). Rear of property. Southern Aspect. Specimen is mature and stands at roughly 21m, crown spread of roughly 8m. Applying to reduce the sail weight of x1 fastigate Beech tree. Aiming to reduce by 30% (4m height, 1m radial spread) removing the large leaders to smaller growth the reduce wind throw by using drop crotch pruning, working with suitable sub dominant growth within the crown to keep to british standards BS3998. Lightly reduce lateral growth to keep in with the natural aesthetics. Estimated finish crown height and spread would be 16m height and 7m spread.
