

Case Ref: DM/25/0110	Date: 20/03/2025
From: NatureSpace	Response: RAMs/PWMS
Recommendations: - The applicant has submitted an Ecological Impact Assessment that concludes the site will need a Precautionary Working Methods Statement to undertake works. It states that this will be provided in a CEMP document. - This would be deemed suitable for the proposed development, and it is recommended that they are secured via condition.	
These comments are in relation to DM/25/0110 Widening and extension of the existing footway for creation of a shared footway/cycleway along the western side of the A273 between Gatehouse Lane and A272 roundabout via the removal of the carriageway hard strip, relocation of existing bus stop bench, lighting, landscaping and associated works. Land Adjacent To Jane Murray Way And North Of Gatehouse Lane Goddards Green Hassocks West Sussex BN6 9LD Ecological Summary: The development is situated in the red impact risk zone indicating that highly suitable habitat is present in the surrounding landscape. Site context: - There are 19 ponds within 500m of the site boundary. The closest being directly adjacent to the site. - There are 11 great crested newt records within 500m of the proposed site boundary. - The site has good connectivity to the north, however, there are barriers to south that would affect dispersal onto the site from the confirmed southern population. - The site consists almost entirely of hardstanding due to the nature of the works. Conclusion: The applicant has provided an Ecological Impact Assessment (Ecological Impact Assessment Report, Waterman Infrastructure & Environment Ltd., February 2025). The report identifies there is a low likelihood that great crested newt present on site, as the works are being undertaken on a main road through a developed area. However, the surveys undertaken returned a positive eDNA record for a nearby pond, therefore indicating there is a great crested newt population in a surrounding landscape. Due to this, the report recommends following a series of precautionary working methods to minimise the impact of the development should great crested newts be using the area. The report states that these will be provided in a CEMP document submitted as part of this application. It is recommended that this is secured by condition. Should a great crested newt be encountered during development, all works must cease and a suitably qualified Ecologist consulted and a license obtained. Should the applicant wish to remove all risk associated with the development, given the confirmed records in the wider landscape, then Mid Sussex District Council have a District Licence scheme that can be accessed.	

Figure above: Outline of the site (red) in the context of the surrounding landscape, including the Impact Risk Zones for great crested newt. Ponds are shown in light blue – not all ponds are visible on this map. A 250m buffer is shown around the site in green and a 500m buffer in blue. Relationship between NatureSpace and the Planning Authority

Mid Sussex District Council holds a Great Crested Newt Organisational (or “District”) Licence granted by Natural England. This is administered by NatureSpace Partnership through their District Licensing Scheme as the council’s delivery partner. A dedicated District Licence Officer is employed by NatureSpace to provide impartial advice to the council and help guide them and planning applicants through the process. All services and arrangements are facilitated in an unbiased, independent, and transparent manner. You can find out more at www.naturespaceuk.com

Legislation, Policy and Guidance

Reasonable Likelihood of Protected Species

Permission can be refused if adequate information on protected species is not provided by an applicant, as it will be unable to assess the impacts on the species and thus meet the requirements of the National Planning Policy Framework (2023), ODPM Circular 06/2005 or the Conservation of Habitats and Species Regulations 2017 (as amended). The Council has the power to request information under Article 4 of the Town and Country (Planning Applications) Regulations 1988 (SI1988.1812) (S3) which covers general information for full applications. CLG 2007 'The validation of planning applications' states that applications should not be registered if there is a requirement for an assessment of the impacts of a development on biodiversity interests.

Section 99 of ODPM Circular 06/2005 states:

"It is essential that the presence or otherwise of protected species, and the extent that they may be affected by the proposed development, is established before the planning permission is granted, otherwise all relevant material considerations may not have been addressed in making the decision. The need to ensure ecological surveys are carried out should therefore only be left to coverage under planning conditions in exceptional circumstances, with the result that the surveys are carried out after planning permission has been granted. However, bearing in mind the delay and cost that may be involved, developers should not be required to undertake surveys for protected species unless there is a reasonable likelihood of the species being present and affected by development. Where this is the case, the survey should be completed and any necessary measures to protect the species should be in place, through conditions and / or planning obligations before permission is granted."

Great crested newts

Great crested newts and their habitats are fully protected under the Conservation of Habitats and Species Regulations 2017 (as amended). Therefore, it is illegal to deliberately capture, injure, kill, disturb or take great crested newts or to damage or destroy breeding sites or resting places. Under the Wildlife and Countryside Act 1981 (as amended) it is illegal to intentionally or recklessly disturb any great crested newts occupying a place of shelter or protection, or to obstruct access to any place of shelter or protection (see the legislation or seek legal advice for full details). Local planning authorities have a statutory duty in exercising of all their functions to 'have regard, so far as is consistent with the proper exercise of those functions, to the purpose of conserving and enhancing biodiversity,' as stated under section 40 of the Natural Environment and Rural Communities Act 2006 (as amended), as well as a duty under the Conservation of Habitats and Species Regulations 2017 (as amended) to have regard to the requirements of the Habitats Directive. As a result, great crested newt and their habitats are a material consideration in the planning process.

Lifespan of Ecological Reports and Surveys

Validity of ecological reports and surveys can become compromised overtime due to being out-of-date. CIEEM Guidelines for Ecological Report Writing (CIEEM, 2017) states, if the age of data is between 12-18 months, "the report authors should highlight whether they consider it likely to be necessary to update surveys". If the age of the data is between 18

months to 3 years an updated survey and report will be required and anything more than 3 years old *“The report is unlikely to still be valid and most, if not all, of the surveys are likely to need to be updated”*.
