Subject: Fw: Comment on planning application DM/25/0589

[REDACTED] t

I would like to object to planning application DM/25/0589 - the installation of a 30 metre mast on land north of Leylands Road. Hopefully I'm not too late, I believe comments can be submitted up until the 10th of April even though submissions are no longer possible on the internet. I would like the following points to be considered:

The mast will be environmentally disruptive. It is not suitable for a corridor of land so close to a nature reserve. The ecology of the strip of land is still recovering from recent works and further building will be detrimental to local wildlife.

At over 30m tall, the mast will dominate the area and be viewable upstairs from our home (and possibly also from ground level during the winter). It will be sited in a densely populated residential area very close to the surrounding houses. I use the corridor to on a regular basis and find it an extremely pleasant place to walk through. The look and feel of this lovely area will be ruined by this ugly mast - surely the beauty of a stretch of the green circle network should not be endangered like this?

There are a lot of health concerns around 5G masts - whether or not these concerns have any basis, many people are fearful of EMF radiation so this siting could affect property prices in the area.

Thank you,
