

HERITAGE STATEMENT

For

Proposed Replacement Windows

At

Howdean, High Street, Cuckfield

Application Number: DM/25/1690

1. Introduction

This Heritage Statement accompanies the planning application for the replacement of windows at Howdean, High Street, Cuckfield (Application Ref: DM/25/1690). The property is located within the Cuckfield Conservation Area, a designated area of special architectural and historic interest. This statement evaluates the potential impact of the proposed works on the heritage significance of the property and its contribution to the wider conservation area.

2. Description of the Heritage Assets

- **Cuckfield Conservation Area:** The conservation area encompasses a historic village centre with a diverse range of architectural styles, spanning several centuries. Special features of the conservation area include its varied building styles, use of traditional materials, and a strong relationship with the surrounding countryside. Cuckfield is also characterised by its wide pavements, the presence of historic buildings, and framing views towards the South Downs. The appraisal of the conservation area highlights these features, underlining the importance of preserving the distinctiveness of the area, including the visual linkages and the quiet streetscapes.
- **Howdean:** Although not listed, Howdean contributes positively to the conservation area's architectural landscape. The dwelling is located on High Street, a key area within the conservation area, and its traditional form and materials reflect the area's historic character. The existing windows, however, detract from the property's aesthetic and do not align with the architectural quality expected in the conservation area.

3. Impact of the Proposal on Heritage Assets

The existing windows at Howdean are standard white UPVC double-glazed units. These windows are outdated, substandard, and do not complement the character of the conservation area or the building's architectural style. The proposed replacement windows will be a significant improvement in both functionality and aesthetic quality. The new windows will be high-quality flush profile grained foil-covered UPVC, designed to replicate the appearance of traditional timber windows. The finish will be white, matching the surrounding buildings within the conservation area, while the ground-floor window on the set-back section of the south elevation will be replaced with a slimline aluminium window in anthracite grey. This modern

window is discreetly placed in a location not visible from the street due to the existing garage blocking the view, further minimising its impact.

The proposed windows will enhance the overall appearance of the property and ensure it is more in keeping with the historical and architectural character of Cuckfield. This approach ensures that the integrity of the property and its contribution to the surrounding conservation area is maintained, with no adverse effects on the heritage value of the area.

4. Contribution of the Setting

The setting of Howdean within the Cuckfield Conservation Area plays a role in its overall heritage value. The building's relationship with its neighbours and its positioning along the High Street provide important contextual connections to other significant heritage features, such as the churchyard, historic buildings, and open spaces. The retention of the existing boundary walls, hedges, and fences ensures that the setting of the property remains intact, with no adverse effects on the broader landscape of the conservation area.

5. Design Considerations

The design of the replacement windows has been carefully considered to reflect the period character of Cuckfield. The materials selected—UPVC with a grained foil finish—mimic traditional timber windows commonly found within the conservation area. The anthracite grey window, while modern, is discreetly located in a set-back part of the building where it will not affect the street view. This respects the guidance for high-quality design in conservation areas, as outlined in both local policies and the Conservation Area Appraisal.

6. Conclusion

The proposed window replacements at Howdean have been designed to improve the quality of the property while maintaining the character of the Cuckfield Conservation Area. The existing windows, which are standard white UPVC double-glazed units, will be replaced with high-quality, aesthetically pleasing windows that enhance the property's visual appearance. The high-quality materials and sympathetic design ensure that the property continues to contribute positively to the village's historic streetscape. The proposal is in line with local and national planning policies, which aim to conserve and enhance heritage assets. Furthermore, the use of appropriate materials and attention to design will ensure that the building remains in harmony with the surrounding environment and the heritage assets of the conservation area.
