Re. Application no DM/25/0446

I wish to object to the above planning application for the following safety reasons:

- To turn right from the B2036 onto the new road I would have to cross a filter lane and then join the main carriageway. There is also a bend close by so visibility would be reduced. This is a very dangerous manoeuvre as I will have to ensure both the filter lane and the main carriageway are clear and then pull out onto the main carriageway.
- The speed limit on the proposed new road and the B2036 should both be 30mph. This would ensure that vehicles did not come with excessive speed around the bend towards the junction. Currently the speed limit on the B2036 is 40mph although this speed limit is often exceeded.
- A roundabout at the junction would make it much safer as was proposed in the original plans. Why has this been removed from the plans?

Thank you for considering my concerns.
Regards
