Subject: Regarding DM/26/1146

[REDACTED]
Good Afternoon Ms Szollosi

We have tried to put a further objection to the planning application DM/26/1146

Your planning portal would not allow this so sending this directly to you though we will try again

Once again we wish to strongly object to the replacement radio mast and antenna. All our previous objections stand that this mast will severely affect the outlook and have an overbearing impact on the area. In this time of climate change a super el-nino wind becoming the norm in excess of 150kmph we could expect the metal knives to come down on top of the surrounding houses. Is the applicant insured for this type of incident causing heavy damage and perhaps loss of life. The manufacturer does not state a width. The antenna attachments could be torn off in 125mph wind and go scything through Turners Hill road traffic. This is a massive intrusion into the area within a tiny garden of a bungalow. Again we would say it would have a severe impact on the mental health of those neighbours having it within their visual fields. We will be constantly worrying about it coming down on top of us

Thank you

Yours sincerely
