

4. Tree locations and protection

There are numerous trees in the neighbours garden (marked in green), south of my property close to the air source heat pump installation. They will not be affected by the works. There are four small trees in my garden around where the pool is being positioned. Access to the pool area is good so the trees will not be affected and I plan to retain all four of them. The trees will be zoned off with orange fencing, to prevent machines or footfall in their vicinity.
