Hi Natalie,

Thanks for sending this over – given the limited nature of the proposed groundworks and the likely disturbance from the existing roadway, I'd be fine with no archaeological mitigation being undertaken for these specific works.

Kind regards,

Mark

Subject: FW: Western Bridge and Link Road (Phase 3) - Heritage Review

CAUTION: This is an external email.

Good afternoon Mark,

I am currently undertaking a heritage review of a Further Environmental Information Report (FEIR) on behalf of Waterman, for a site at Burgess Hill: Phase 3 which relates to the provision of a shared footway and cycleway over a distance of approximately 500m. Within the report, there is a recommendation to consult with the county archaeologist to establish whether any further archaeological works would be required to support the RMA.

The assessment established that there was low potential for archaeological remains within the site and that the Phase 3 construction and operation impacts would be negligible as they are minimal. The proposed groundworks will be limited, and will be contained within made ground deposits forming the embankment of the existing roadway constructed in the 1990's. It has been concluded that no mitigation works are proposed but I wanted to check that you are happy with this approach

Please see attached the general arrangement plan

Let me know if you need anything else

Kind regards
Natalie
