Retrospective Planning permission DM/26/0216

Following the site visit today, the Planning Officer was able to see for themselves the intrusion into our home, particularly into the bedroom. The two large dormer windows already installed are a huge invasion of our privacy and it would be a bridge too far to allow any more roof lights/windows of any sort.

As matters stand, number 11, Barnfield's attic has a very large expanse of glass in the dormer windows and two Velux windows all of which have been recently installed. The planning permission was for a bedroom and a shower room so there is no need for any further windows. Similarly, we cannot see any justification for a dormer window in the ground floor roof, especially with the prospect of having a side door which could be glazed.

We therefore object to any proposal to permit anymore skylights, dormer windows or any other glazing to the roof of this property.
